[Datafied Democracies & AI Economics Unplugged](#) Igor Calzada, 2026-01-01

This book explores how AI, Economics, innovation systems, and policies data cooperatives and data sovereignty are redefining democracy, governance, and economic life in datafied societies. Through global case studies, it examines how smart cities, generative AI, GenAI, and decentralization shape the emergence of datafied democracies, network states, and algorithmic nations. It asks whether these transformations can foster anticipatory governance and democratic renewal or instead reinforce inequality and technocratic control. Engaging with themes such as technopolitics, digital sovereignty, and post-Westphalian forms of governance, the book bridges political economy, urban studies, and innovation policy to illuminate the evolving relationship between power, technology, and democracy. Without being utopian or dystopian, it advances a civic and institutional framework for aligning technological disruption with digital inclusion strategies. Offering policymakers, researchers, and civic leaders an integrated roadmap, it outlines how citizens, institutions, and AI systems in smart cities and network states can share responsibility for shaping more inclusive, accountable, and innovative digital futures.

Towards HRI of Everyday Life Karolina Zawieska, Mohammad Obaid, Wafa Johal, Jessica Sorenson, Catharina Vesterager Smedegaard, Glenda Hannibal, 2025-10-03

Presently, it is often assumed that at least in principle, robots and social robots in particular, have the potential to increase human well-being across a wide range of sectors and application areas. At the same time, efforts to introduce such systems into our everyday environments have had only limited success, and it is yet to be seen whether the impact of social robots on our daily lives, professional and private, will actually be beneficial. Therefore, there is a need to systematically address and study the long-term use and presence of social robots in everyday environments where humans not only interact with robots but also have them integrated into the totality of their lived experiences in everyday life. One of the main ways to investigate human engagement with social robots in everyday environments is through HRI studies conducted in the wild. While such an approach has certainly been instrumental to and is increasingly used in HRI research, we propose here to further expand the underlying theoretical and methodological frameworks to address the notion of everyday life. The latter is viewed here as a

useful concept and an umbrella term that allows us to address not only specific application domains for robots but also the continuity and totality of human lived experiences that emerge through long term engagement with social robots in everyday life contexts Placing social robots in everyday settings has often been an explicit goal for robot development however the notion of everyday life has yet to be systematically analysed and addressed in this context Therefore this Research Topic aims to bring together a wide range of disciplinary and interdisciplinary contributions to further develop the HRI domain
