Immunotherapies Against Infectious Diseases Saba Tufail, Mohammad Asif Sherwani, Najmul Islam, 2024-11-08 Infectious diseases have jeopardized human health significantly as evidenced by the ongoing Covid 19 pandemic. In recent years, the world has witnessed outbreaks of many emerging and re-emerging infections such as SARS, most recent by SARS-CoV-2, Ebola, Zika, MERS, dengue, which in addition to taking millions of lives, have posed major health issues for recovered individuals. Moreover, several infectious agents like hepatitis B and C viruses, human papillomavirus, human immunodeficiency virus type 1, Epstein Barr virus, human T cell leukemia lymphoma virus type 1, Kaposi's sarcoma-associated herpesvirus, Helicobacter pylori, and Streptococcus bovis have been found to cause different types of cancers since the action mechanism of these agents sometimes transforms an infected cell into a cancer cell. As these infections are difficult to treat with available drugs owing to their lower efficacy, toxicity, and emergence of drug resistance, immunotherapy is viewed as a viable option. Immunotherapy is manipulating body's defense mechanism to treat and manage disease. Threats of emerging and reemerging infectious diseases, in addition to dangers of developing cancer due to cancer-causing infectious agents, combined with lack of effective treatment modalities, has shifted the focus of the scientific community to immunotherapy. Advancements in immunotherapies comprising vaccines, monoclonal antibodies, cytokines, T cells, and checkpoint inhibitors have shown immense promise in combating not only cancer but infectious diseases as well. Through this Research Topic, we aim to discuss recent advances in immunotherapy-based treatment management of infectious diseases. We aim to include studies that evaluate how different forms of immunotherapies, including vaccines, can be exploited for preventing, treating, and managing infectious diseases. We welcome Original Research Articles, Reviews, and Mini reviews discussing the following main themes: Vaccines against emerging/re-emerging diseases, Vaccine design components, technologies such as adjuvants, delivery systems, administration route, dosage, Targeted therapy, Cancer immunotherapy using, but not limited to, monoclonal antibodies, cytokines, T cells, and

checkpoint inhibitors Monoclonal antibodies including nanobodies against SARS COV 2 for the treatment and prevention of COVID 19 Immunotherapies for infectious diseases using but not limited to monoclonal antibodies cytokines T cells and checkpoint inhibitors Authors are encouraged to submit manuscripts elaborating the use of delivery systems nanoparticles nanomaterials for the aforementioned theme themes Perspectives in Business Informatics Research Erika Nazaruka,Kurt Sandkuhl,Ulf Seigerroth,2022-09-15 This book constitutes the proceedings of the 21st International Conference on Perspectives in Business Informatics Research BIR 2022 which took place in Rostock Germany in September 2022 The central theme of BIR 2022 was Business Informatics for Sustainable Innovation Achieving sustainability requires a multi perspective approach taking organizational economic and technical aspects into account In a world of cloud computing social networks and big data additional challenges for business informatics and the design of information systems architectures are introduced To deal with these challenges a close cooperation of researchers from different disciplines such as information systems business informatics and computer science is required The 14 papers presented in this volume were carefully reviewed and selected from 41 submissions They were organized in topical sections as follows Information system development modeling methods and assistance applications and technologies and digital business The Routledge Handbook of Human Research Ethics and Integrity in Australia Bruce M.
