CNC MACHINE (Operating and Programming) ajay dhamande, 2023-07-01 This book of CNC MACHINE operating and programming of machines it is useful to students of ITI DIPLOMA and DEGREE ENGINEERING and those are working in machining industries The book mainly divide in 4 parts 1 how to operate the machine 2 setting process of machine 3 cutting tool selection process 4 how to write programming according to the process carried out In support it has technical topics like Drawing reading About Geometric Dimension and tolerances Speed and feed calculations All topic has ended up with the possible question that can be raised will facing exam or interviews and the answers are accessible to each user by email notification more than 20 solved programs for each process that were carried out on CNC TURNING and VMC machines and assess will be for more solved exercises through scanning given at the end of each chapter the author has shared his 18 years of training and working experience while describing each topic looking at the need for freshers to well experienced fellows you can communicate with us through the given channel on book back covers for any assistance all the best

Manufacturing Technology - II Anup Goel, 2021-01-01 Manufacturing Technology II is a branch of mechanical engineering which extensively deals with the production of industrial goods with the help of advanced tools and machinery This subject gives information which covers the more practical knowledge than the theory It provides tool to enable production of manufacturing goods efficiently The subject gives idea to maximise product quality and to minimise the production cost It also gives information about the different surface finishing techniques My hope is that this book through its careful explanations of concepts practical examples and figures bridges the gap between knowledge and proper application of that knowledge *Catalog of Copyright Entries, Fourth Series* Library of Congress. An Intelligent Inspection Planning System for Prismatic Parts on CMMs Slavenko M. Stojadinović, Vidosav D. Majstorović, 2019-02-09 This book examines an intelligent system for the inspection planning of prismatic parts on coordinate measuring machines CMMs The content focuses on four main elements the engineering ontology the model of inspection planning for prismatic parts on CMMs the optimisation model of the measuring path based on an ant colony approach and the model of probe configuration and setup planning based on a genetic algorithm The model of inspection planning for CMMs developed here addresses inspection feature construction the sampling strategy probe accessibility analysis automated collision free operation and probe path planning The proposed model offers a novel approach to intelligent inspection while also minimizing human involvement and thus the risk of human error through intelligent planning of the probe configuration and part setup The advantages of this approach include reduced preparation times due to the automatic generation of a measuring protocol potential optimisation of the measuring probe path i e less time needed for the actual measurement and increased planning process autonomy through minimal human involvement in the setup analysis and probe
