*Cosmic Strings and Other Topological Defects* Alexander Vilenkin,A. Vilenkin,E. P. S. Shellard,1994 Now in paperback this book is the first comprehensive and coherent introduction to the role of cosmic strings and other topological defects in the universe This study has been one of the major driving forces in cosmology over the last decade and lies at the fruitful intersection of particle physics and cosmology After an introduction to standard cosmological theory and the theory of phase transitions in the early universe the book then describes in turn the properties formation and cosmological implications of cosmic strings monopoles domain walls and textures The book concludes with a chapter considering the role of topological defects in inflationary universe models Ample introductory material is included to make the book accessible to the wide audience of particle physicists astrophysicists and cosmologists for whom this topic is of immediate interest [Quantum Geometry](#) Jan Ambjørn,Bergfinnur Durhuus,Þórður Jónsson,1997-06-19 Describes random geometry and applications to strings quantum gravity topological field theory and membrane physics

## **Topological Defects and the Non-Equilibrium Dynamics of Symmetry Breaking Phase Transitions**

Yuriy M. Bunkov,Henri Godfrin,2012-12-06 Topological defects formed at symmetry breaking phase transitions play an important role in many different fields of physics They appear in many condensed matter systems at low temperature examples include vortices in superfluid helium 4 a rich variety of defects in helium 3 quantized magnetic flux tubes in type II superconductors and disclination lines and other defects in liquid crystals In cosmology unified gauge theories of particle interactions suggest a sequence of phase transitions in the very early universe some of which may lead to defect formation In astrophysics defects play an important role in the dynamics of neutron stars In 1997 the European Science Foundation started the scientific network Topological defects headed by Tom Kibble This network has provided us with a unique opportunity of establishing a collaboration between the representatives of these very different branches of modern physics The NATO ASI Advanced Study Institute held in Les Houches in February 1999 thanks to the support of the Scientific Division of NATO the European Science Foundation and the CNRS represents a key event of this ESF network It brought together participants from widely different fields with diverse expertise and vocabulary fostering the exchange of ideas The lectures given by particle physicists cosmologists and condensed matter physicists are the result of the fruitful collaborations established since 1997 between groups in several European countries and in the U S A

*Inflation and String Theory* Daniel Baumann,Liam McAllister,2015-04-23 This accessible volume provides a modern treatment of the cosmological and string theoretic background necessary to understand inflation in string theory

Meeting On General Relativity Remo Ruffini,Thibault Damour,Robert T Jantzen,2012-02-02 Marcel Grossmann Meetings are formed to further the development of General Relativity by promoting theoretical understanding in the fields of physics

mathematics astronomy and astrophysics and to direct future technological observational and experimental efforts In these meetings are discussed recent developments in classical and quantum gravity general relativity and relativistic astrophysics with major emphasis on mathematical foundations and physical predictions with the main objective of gathering scientists from diverse backgrounds for deepening the understanding of spacetime structure and reviewing the status of test experiments for Einstein s theory of gravitation The range of topics is broad going from the more abstract classical theory quantum gravity and strings to the more concrete relativistic astrophysics observations and modeling The three volumes of the proceedings of MG12 give a broad view of all aspects of gravitational physics and astrophysics from mathematical issues to recent observations and experiments The scientific program of the meeting includes 29 plenary talks stretched over 6 mornings and 74 parallel sessions over 5 afternoons Volume A contains plenary and review talks ranging from the mathematical foundations of classical and quantum gravitational theories including recent developments in string theories to precision tests of general relativity including progress towards the detection of gravitational waves to relativistic astrophysics including such topics as gamma ray bursts black hole physics both in our galaxy in active galactic nuclei and in other galaxies neutron stars pulsar astrophysics gravitational lensing effects neutrino physics and ultra high energy cosmic rays The rest of the volumes include parallel sessions on dark matter neutrinos X ray sources astrophysical black holes neutron stars binary systems radiative transfer accretion disks alternative gravitational theories perturbations of collapsed objects analog models black hole thermodynamics cosmic background radiation constants of nature large scale structure topology of the universe brane world cosmology early universe models cosmic microwave background anisotropies inhomogeneous cosmology inflation gamma ray burst modeling supernovas global structure singularities cosmic censorship chaos Einstein Maxwell systems inertial forces gravitomagnetism wormholes time machines exact solutions of Einstein s equations gravitational waves gravitational wave detectors data analysis precision gravitational measurements history of relativity quantum gravity loop quantum gravity Casimir effect quantum cosmology strings branes self gravitating systems gamma ray astronomy cosmic rays gamma ray bursts and quasars Particle Physics And The Universe, Proceedings Of Nobel Symposium 109 Lars Bergstrom,Per Carlson,Claes Fransson,2001-03-09 It is generally felt in the cosmology and particle astrophysics community that we have just entered an era which later can only be looked back upon as a golden age Thanks to the rapid technical development with powerful new telescopes and other detectors taken into operation at an impressive rate and the accompanying advancement of theoretical ideas the picture of the past present and future Universe is getting ever clearer Some of the most exciting new findings and expected future developments are discussed in this invaluable volume The topics covered include the physics of the early Universe and ultra high energy processes Emphasis is also put on neutrino physics and astrophysics with the evidence for non zero neutrino masses emerging from both solar neutrinos and atmospheric neutrinos covered in great depth Another field with interesting new results concerns the basic

cosmological parameters where both traditional methods and the potential of new ones like deep supernova surveys and acoustic peak detections in the cosmic microwave background are thoroughly discussed Various aspects of the dark matter problem such as gravitational lensing estimates of galaxy masses cluster evolution and hot cluster electron distortions of the thermal microwave background spectrum are also discussed as are particle physics candidates of dark matter and methods to detect them Cosmic rays of matter and antimatter are included as a topic and so is the problem of the enigmatic dark energy of the vacuum

**Inflation and String Theory**

Daniel Baumann,Liam McAllister,2015-04-23

The past two decades have seen transformative advances in cosmology and string theory Observations of the cosmic microwave background have revealed strong evidence for inflationary expansion in the very early universe while new insights about compactifications of string theory have led to a deeper understanding of inflation in a framework that unifies quantum mechanics and general relativity Written by two of the leading researchers in the field this complete and accessible volume provides a modern treatment of inflationary cosmology and its connections to string theory and elementary particle theory After an up to date experimental summary the authors present the foundations of effective field theory string theory and string compactifications setting the stage for a detailed examination of models of inflation in string theory Three appendices contain background material in geometry and cosmological perturbation theory making this a self contained resource for graduate students and researchers in string theory cosmology and related fields

*A New Generation of Cosmic Superstring Simulations* José Ricardo C. C. C. Correira,2023-02-19

Topological defects are an expected consequence of phase transitions in the early Universe As such these objects if detected provide unequivocal evidence of physics beyond the Standard Model This means they are prime targets for new observational facilities However our understanding of defects is heavily bottlenecked by computational limitations In this book the author explores the use of accelerator hardware to alleviate this problem presenting the world s first multiple GPU defect simulations Such simulations can evolve a network of line like cosmic strings at an unprecedented resolution Then these are used to obtain the most accurate to date calibrations of semi analytical

modelling and to show the impact of accuracy on observational consequences of strings Lastly a modified version of this application is used to study interconnected networks of strings in greater detail than ever before This book benefits any student or researcher who wishes to learn about field theory simulations in the early Universe and about supercomputing with multiple accelerators Gravity and Strings Tomás Ortín,2015-03-26 Self contained and comprehensive this definitive new edition of Gravity and Strings is a unique resource for graduate students and researchers in theoretical physics From basic differential geometry through to the construction and study of black hole and black brane solutions in quantum gravity via all the intermediate stages this book provides a complete overview of the intersection of gravity supergravity and superstrings Now fully revised this second edition covers an extensive array of topics including new material on non linear electric magnetic duality the electric tensor formalism matter coupled supergravity supersymmetric solutions the geometries of scalar manifolds appearing in 4 and 5 dimensional supergravities and much more Covering reviews of important solutions and numerous solution generating techniques and accompanied by an exhaustive index and bibliography this is an exceptional reference work The Mathematical Theory of Cosmic Strings M.R. Anderson,2015-05-06 This book is a comprehensive survey of the current state of knowledge about the dynamics and gravitational properties of cosmic strings treated in the idealized classical approximation as line singularities described by the Nambu Goto action The author's purpose is to provide a standard reference to all work that has been published since the mid 1 The Formation and Evolution of Cosmic Strings G.
