

CHEMICAL EQUILIBRIUM

Basic theory of equilibrium

- Equilibrium represents the state of a process in which the measurable properties like - temp., pressure, colour, conc. of the system do not show any change with the passage of time.
- Equilibrium is a dynamic process, chemical equilibrium can be approached from both sides.
- The state of equilibrium is not affected by the presence of catalyst. It only helps to attain the equilibrium state in less or more time.
- Equilibrium can be attained both in homogeneous & heterogeneous system.

Types of reaction based on direcⁿ

Reversible rxn

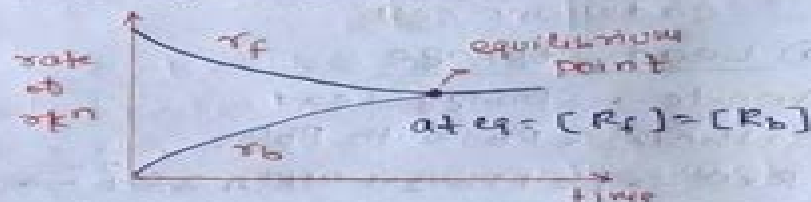

- Rxn take place in both direction
- Generally these rxn are take place in close container
- Reactant are never completely converted into the product.
- Product can be converted into reactant.

Irreversible rxn

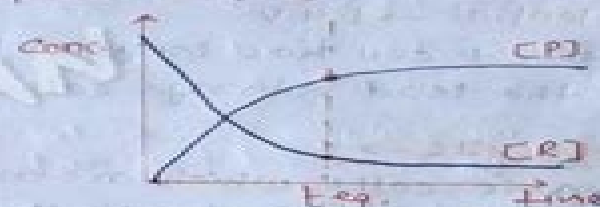

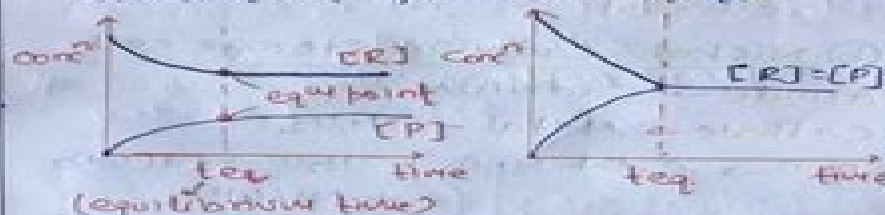

- Only in one direction.
- in open container.
- completely converted into product.
- product can't be converted into reactant.

Equilibrium state

- ① Rate of forward reaction equal to rate of backward rxn.

- ② Conc. of reactant & product are constant at equilibrium state.

- ③ Equilibrium state doesn't change by the presence of catalyst.
- ④ Catalyst increase the rate of forward & backward rxn equally.
- ⑤ Catalyst reduced the time to attained the equilibrium.
- ⑥ Equilibrium is dynamic in nature.
- ⑦ The value of gibbs (ΔG) is zero at equilibrium state.

Law of Mass action (LONA) →

→ Rate of chemical rxn is proportional to product of the active mass of the reactant is called LONA.

Chemical Equilibrium Solution Manual

Chemical Equilibrium Solution Manual:

Fundamentals Of Solid-state Electronics: Solution Manual Chih Tang Sah,1996-09-30 This Solution Manual a companion volume of the book Fundamentals of Solid State Electronics provides the solutions to selected problems listed in the book Most of the solutions are for the selected problems that had been assigned to the engineering undergraduate students who were taking an introductory device core course using this book This Solution Manual also contains an extensive appendix which illustrates the application of the fundamentals to solutions of state of the art transistor reliability problems which have been taught to advanced undergraduate and graduate students This book is also available as a set with Fundamentals of Solid State Electronics and Fundamentals of Solid State Electronics Study Guide **Exercises Solution Manual for MATLAB Applications in Chemical Engineering** Chyi-Tsong Chen,2022-06-30 This self study solution manual in accompany with the book MATLAB Applications in Chemical Engineering is designed to provide readers with the key points of solving exercise problems at the end of each chapter which therefore instructively guides readers to familiarize themselves with the related MATLAB commands and programming methods for various types of problems Additionally through the assistance of this solution manual the readers would profoundly strengthen the logical abilities problem solving skills and deepen the applications of MATLAB programming language to solve analysis design simulation and optimization problems arose in related fields of chemical engineering The preparation of this manual is not for directly providing solutions but through key guidance overview and analysis and instructional solution steps to gradually cultivate readers problem solving skills **A Manual of Chemical Laboratory Work for Engineering Students** Francis Jones Pond,Jerome John Morgan,1911 **Laboratory Manual of Inorganic Chemistry** John Bernard Ekeley,1923 *The Medical student's manual of chemistry* Rudolph August Witthaus,1906 **A Laboratory Manual of General Chemistry** Leon Burr Richardson,Andrew Jackson Scarlett,1929 Laboratory Manual in General College Chemistry Joseph Albert Babor,Alexander Lehrman,1929 **Monthly Catalog of United States Government Publications** ,1980 ORNL-NSIC ,1966 **Fluid Mechanics and Fluid Power (Vol. 3)** Suvanjan Bhattacharyya,Saket Verma,A. problems they will encounter as practicing engineers For over a decade Mark Benjamin's Water Chemistry has brought to the classroom a balanced coverage of fundamentals and analytical algorithms in a student friendly accessible way The text distinguishes itself with longer and more detailed explanations of the relevant chemistry and mathematics allowing students to understand not only which techniques work best for a given application but also why those techniques should be applied and what their limitations are The end result is a solid thorough framework for comprehending equilibrium in complex aquatic systems The second edition includes a thorough introductory explanation of chemical reactivity and a new chapter on reaction kinetics providing much needed context as well as full treatments of the tableau method and TOTH equation The discussion of the thermodynamic perspective on chemical reactivity has been extensively revised The entire book now integrates Visual Minteq the most popular software for analyzing chemical equilibria into the problem solving approach Additional exercises range more widely in difficulty giving instructors more flexibility and diversity in their assignments
