

Rev.8

Control Board DL-1275 with 12V Meter Output

This dispenser is controlled by the game software. The game turns on the dispenser with a logic high signal and monitors a return notch signal from the ticket dispenser to turn it off. It will dispense as many tickets as games options allow.

NOTES

1. Resistor RS and diode CR3 and the jumper going to pin 1 of the IC are changed for this revision. This was done to limit the current going through the switch and then to pins 1 & 9 of the IC. This resolves problems that occurred with units that used unregulated power supplies. Deltronic Labs still recommends that regulated supplies be used. Changes closely reflecting these changes were made in the previous revision. (Rev. 7)

2. Resistors R10, R15, and R25 were deleted from this schematic. The Rev. 7 schematic shows these resistors, but they were never actually inserted on the board.
3. The unit as shipped from the factory (as per this schematic), will trigger the counter whenever tickets are dispensed normally but NOT when doing so by pressing the switch. If desired, the unit can be changed so that tickets dispensed by pressing the switch are also counted. Do this by deleting diode CR5.
4. This unit can be made to conform to CE specifications by the addition of 4 components not shown here. If this is

desired, please order the ALL-CE version, and the unit will be shipped with the necessary components.

5. This unit can be configured in a number of ways. Please check our "Full Options" schematic to see the different configurations. If this schematic is not included with your manual, contact us for a copy.
6. If tickets are highly translucent, the 4.3 Kohm resistor R3 can be lowered in value (e.g. 2.2 Kohm). For more sensitive adjustments, the jumper V-1 can be replaced with a 25K pot, and the 4.3 Kohm resistor (R3) changed to 1 Kohm.
