Designing Virtual Reality Systems Gerard Kim,2005-09-08 Developing and maintaining a VR system is a very difficult task requiring in depth knowledge in many disciplines The difficulty lies in the complexity of having to simultaneously consider many system goals some of which are conflicting This book is organized so that it follows a spiral development process for each stage describing the problem and possible solutions for each stage Much more hands on than other introductory books concrete examples and practical solutions to the technical challenges in building a VR system are provided Part 1 covers the very basics in building a VR system and explains various technical issues in object modeling and scene organization Part 2 deals with 3D multimodal interaction designing for usable and natural interaction and creating realistic object simulation Primarily written for first level graduates advanced undergraduates and IT professionals will also find this a valuable guide

Kelly (Ph. D.),Suzanne Lassacher,Zach Shipstead,2007 A rapid prototyping approach was used in the driving simulation laboratory at the Western Transportation Institute WTI to simulate approximately 22 miles of US 191 between the Big Sky Resort community and the northern mouth of the Gallatin Canyon Custom roadway tiles for the simulation were designed and programmed from the Montana Department of Transportation MDT as built plans for the highway topographic maps and video taken from a vehicle driving the route The simulations may be used to help the MDT develop and refine safety countermeasures for that roadway The primary benefit of the visualization and rapid prototyping approach using interactive immersive simulators is that it provides an opportunity for formative evaluation allowing engineers to refine the design at an early stage in the system development process before significant resources are invested in the deployment As a demonstration and evaluation of the technology a study of driver response to speed limits posted on virtual dynamic message signs over the roadway was conducted Such signs may be used to post speed limits that vary according to road conditions Drivers were tested with posted speed limits of 50 MPH 60 MPH and in a control condition with no posted limits There was little difference in driving behavior between drivers with no posted limits and those with a 60 MPH limit posted Drivers with a posted 50 MPH limit reduced their speeds by approximately 6 MPH Drivers with the 50 MPH limit also showed decreased variation in lane position i e fewer and or smaller deviations from center of lane Proceedings of the ...
