Mastering Computer Vision with TensorFlow 2.x Krishnendu Kar,2020-05-15 Apply neural network architectures to build state of the art computer vision applications using the Python programming language Key FeaturesGain a fundamental understanding of advanced computer vision and neural network models in use todayCover tasks such as low level vision image classification and object detectionDevelop deep learning models on cloud platforms and optimize them using TensorFlow Lite and the OpenVINO toolkitBook Description

Computer vision allows machines to gain human level understanding to visualize process and analyze images and videos. This book focuses on using TensorFlow to help you learn advanced computer vision tasks such as image acquisition, processing and analysis. You'll start with the key principles of computer vision and deep learning to build a solid foundation before covering neural network architectures and understanding how they work rather than using them as a black box. Next you'll explore architectures such as VGG, ResNet, Inception, R-CNN, SSD, YOLO and MobileNet. As you advance, you'll learn to use visual search methods using transfer learning. You'll also cover advanced computer vision concepts such as semantic segmentation, image inpainting with GANs, object tracking, video segmentation and action recognition. Later the book focuses on how machine learning and deep learning concepts can be used to perform tasks such as edge detection and face recognition. You'll then discover how to develop powerful neural network models on your PC and on various cloud platforms. Finally, you'll learn to perform model optimization methods to deploy models on edge devices for real time inference. By the end of this book, you'll have a solid understanding of computer vision and be able to confidently develop models to automate tasks. What you will learn: Explore methods of feature extraction and image retrieval and visualize different layers of the neural network model. Use TensorFlow for various visual search methods for real world scenarios. Build neural networks or adjust parameters to optimize the performance of models. Understand TensorFlow DeepLab to perform semantic segmentation on images and DCGAN for image inpainting. Evaluate your model and optimize and integrate it into your application to operate at scale. Get up to speed with techniques for performing manual and automated image annotation.

Who this book is for: This book is for computer vision professionals, image processing professionals, machine learning engineers and AI developers who have some knowledge of machine learning and deep learning and want to build expert level computer vision applications. In addition to familiarity with TensorFlow, Python knowledge will be required to get started with this book.
