

An object's orbit depends on the "mass inside" its orbit (also known as the *interior mass*). For a planet in our Solar System, you can find the interior mass by adding the Sun's mass to the mass of each object between the Sun and the planet's orbit. For example, the interior mass to Earth's orbit would be the Sun's mass plus the mass of Mercury plus the mass of Venus.

Here is a table that lists each planet, the mass inside each planet's orbit, and the speed at which the planets orbit the Sun.

Planet	Interior Mass (solar masses)	Orbital Speed (km/s)
Mercury	1.00	47.9
Venus	1.0000027	35.0
Earth	1.0000057	29.8
Mars	1.0000060	24.1
Jupiter	1.00096	13.1
Saturn	1.0012	9.66
Uranus	1.0013	6.81
Neptune	1.0013	5.43

1) Where is the vast majority of mass in the solar system located? What object or objects account for most of this mass?

2) Two students are discussing their answers to Question 1:

Student 1: *I think the majority of the mass in the solar system must include both the Sun and the planets. As you get farther away from the Sun, the interior mass gets bigger and bigger because you include more planets.*

Student 2: *I disagree. The majority of the mass in the solar system is from just the Sun by itself. Sure the mass gets a little bigger as you include more planets, but the additional mass from planets is really small.*

Do you agree or disagree with either or both of the students? Explain your reasoning.

3) How do the orbital speeds of planets farther from the Sun compare to the orbital speeds of planets closer to the Sun?

Dark Matter Lecture Tutorial:

Engineering Trustworthy Software Systems Zhiming Liu, Zili Zhang, 2016-02-29 This volume contains the lecture notes of the five courses and one seminar given at the School on Engineering Trustworthy Software Systems SETSS 2014 held in September 2014 at Southwest University in Chongqing China The material is useful for postgraduate students researchers academics and industrial engineers who are interested in the theory and practice of methods and tools for the design and programming of trustworthy software systems The common themes of the courses include the design and use of theories techniques and tools for software specification and modeling analysis and verification The courses cover sequential programming component and object software hybrid systems and cyber physical systems with challenges of termination security safety security fault tolerance and real time requirements The techniques include model checking correctness by construction through refinement and model transformations synthesis and computer algebra *The Invisible Universe: Dark Matter and Dark Energy* Eleftherios Papantonopoulos, 2007-08-01 The nature and essence of Dark Matter and Dark Energy have become the central issue in modern cosmology over the past years This extensive volume an outgrowth of a topical and tutorial summer school has been set up with the aim of constituting an advanced level multi authored textbook which meets the needs of both postgraduate students and young researchers in the fields of modern cosmology and astrophysics

Tutorial Lecture Series - Institute of Environmental Sciences, 1967 *Astrophysics at Very High Energies* Felix Aharonian, Lars Bergström, Charles Dermer, 2013-04-04 With the success of Cherenkov Astronomy and more recently with the launch of NASA's Fermi mission very high energy astrophysics has undergone a revolution in the last years This book provides three comprehensive and up to date reviews of the recent advances in gamma ray astrophysics and of multi messenger astronomy Felix Aharonian and Charles Dermer address our current knowledge on the sources of GeV and TeV photons gleaned from the precise measurements made by the new instrumentation Lars Bergström presents the challenges and prospects of astro particle physics with a particular emphasis on the detection of dark matter candidates The topics covered by the 40th Saas Fee Course present the capabilities of current instrumentation and the physics at play in sources of very high energy radiation to students and researchers alike This book will encourage and prepare readers for using space and ground based gamma ray observatories as well as neutrino and other multi messenger detectors *Yet Another Introduction to Dark Matter* Martin Bauer, Tilman Plehn, 2019-06-11 Dark matter is a frequently discussed topic in contemporary particle physics Written strictly in the language of particle physics and quantum field theory these course based lecture notes focus on a set of standard calculations that students need in order to understand weakly interacting dark matter candidates After introducing some general features of these dark matter agents and their main competitors the Higgs portal scalar and supersymmetric neutralinos are introduced as our default models In turn this serves as a basis for exploring four experimental aspects the dark matter relic density extracted from the cosmic microwave background indirect detection

including the Fermi galactic center excess direct detection and collider searches Alternative approaches like an effective theory of dark matter and simplified models naturally follow from the discussions of these four experimental directions

Dark Matter in the Universe John N. Bahcall,Tsvi Piran,Steven Weinberg,2004 If standard gravitational theory is correct then most of the matter in the universe is in an unidentified form which does not emit enough light to have been detected by current instrumentation This book is the second edition of the lectures given at the 4th Jerusalem Winter School for Theoretical Physics with new material added The lectures are devoted to the missing matter problem in the universe the search to understand dark matter The goal of this volume is to make current research work on unseen matter accessible to students without prior experience in this area and to provide insights for experts in related research fields Due to the pedagogical nature of the original lectures and the intense discussions between the lecturers and the students the written lectures included in this volume often contain techniques and explanations not found in more formal journal publications
