*The Next World War* James Adams, 2001-03-23 It is a silent invisible and deadly weapons system It can paralyze an entire nation without a single soldier being sent to war We glimpsed its potential on television when surgical strikes on radar sites electrical power plants and command networks crippled Iraqi forces during the Gulf War Now in *The Next World War* James Adams shows how a new chapter in military history is being written as the Information Age comes to the battlefield to bigger and stronger now add smarter As increasingly sophisticated computers and microtechnology have become available the concept of conventional warfare has changed Technology has already made its way to the front lines soldiers are now equipped for example with new smart technologies such as handheld computers that allow them to e mail their commanders There are devices that can sense an enemy s presence before the enemy is visible by detecting body heat or by communication with satellites overhead Robotic bugs can even be sent in swarms to sabotage weapons or subdue enemy soldiers But the most significant and important use of information warfare won t be on the battlefield The most devastating weapons will be those that target an enemy s infrastructure air control systems electrical grids and communication networks to name just a few potential targets Trojan horse chips or viruses designed to accept and respond to commands from U S military intelligence can be installed in computers being sold overseas making them vulnerable to attack By hacking into computer systems the United States could override programmed commands and thus shut down air traffic control systems and open floodgates and bridges Misinformation could even be broadcast for example by using imaging technology to simulate a television appearance by an enemy nation s leaders This type of combat puts civilians at

more risk than ever as financial communication transportation and other infrastructure systems become prime military targets And information warfare puts the United States a nation increasingly dependent on technology in a position of both definite advantage and extreme vulnerability In The Next World War James Adams draws on impressive research as well as his lifetime of reporting on intelligence and military affairs to give us a chilling scenario of how wars will be fought in the new millennium and how much closer to home they might strike
