Towards the Framework of Livable and Resilient

Cities Baojie He, Cristina Piselli, Hirushie Karunathilake, Ali Cheshmehzangi, Shady Attia, Amos Darko, 2025-10-11 This book gathers a diverse collection of essays analyzing the connections between urban design sustainability and climate adaptation. This extensive volume is constructed around four significant themes: urban design and public spaces, renewable energy and building technologies, climate adaptation strategies, and behavioral and policy approaches to climate change mitigation. The first section tests the essential role of urban design in creating resilient walkable communities and public spaces, digging into topics such as urban agroecology, children's city architecture, and innovative strategies for climate control in urban settings. From the traditional storm water management systems of India to the revitalization of street dynamics, these chapters demonstrate how design can contribute to urban resilience. The second section emphasizes the area of renewable energy and sustainable building technologies, with a certain stress on how buildings can reinforce zero energy and low carbon living in altering climates. The section covers leading inventions such as building integrated photovoltaics (BIPV), green hydrogen production, and passive design strategies, granting a roadmap for integrating renewable energy solutions into both residential and urban scales. In the third part, the book surveys climate adaptation strategies that tackle the obstacles caused by climate change. Case studies of urban and architectural solutions reveal how outdoor space geometry, green infrastructure, and hydrophilic design can relieve the effects of severe weather conditions, enhance air quality, and elevate thermal comfort in dry and tropical climates. Ultimately, the book analyzes behavioral and policy tactics to climate change moderation, underlining the weight of sustainable practices at both discrete and institutional levels. Topics such as climate finance, travel adaptation strategies, and the role of universities in urban regeneration accentuate the serious connection between policy, human behavior, and climate action.

Shared Decision Making in Health Care Glyn Elwyn, Adrian Edwards, Rachel Thompson, 2016-07-22 Over the past decade, health care systems around the world have placed increasing importance on the relationship between patient choice and clinical decision making. In the years since the publication of the second edition of *Shared Decision Making in Health Care*, there have been significant new developments in the field, most notably in the US where Obamacare puts shared decision making (SDM) at the centre of the 2009 Affordable Care Act. This new edition explores shared decision making by examining from practical and theoretical perspectives what should comprise an effective decision making process. It also looks at the benefits and potential difficulties that arise when patients and clinicians share health care decisions. Written by leading experts from around the world and utilizing high quality evidence, the book provides an up to date reference with real world context to the topics discussed and in depth coverage of the practicalities of implementing and teaching SDM. The breadth of information in *Shared Decision Making* in

Health Care makes it an essential resource for policy makers and health care workers As health care systems adapt to increasingly collaborative patient clinician care frameworks this will also prove a useful guide to SDM for clinicians of all disciplines
