Virtual Manufacturing Wasim Ahmed Khan, Abdul Raouf, Kai Cheng, 2011-02-16 Virtual Manufacturing presents a novel concept of combining human computer interfaces with virtual reality for discrete and continuous manufacturing systems. The authors address the relevant concepts of manufacturing engineering, virtual reality, and computer science and engineering before embarking on a description of the methodology for building augmented reality for manufacturing processes and manufacturing systems. Virtual Manufacturing is centered on the description of the development of augmented reality models for a range of processes based on CNC, PLC, SCADA, mechatronics, and on embedded systems. Further discussions address the use of augmented reality for developing augmented reality models to control contemporary manufacturing systems and to acquire micro and macro level decision parameters for managers to boost profitability of their manufacturing systems. Guiding readers through the building of their own virtual factory software, Virtual Manufacturing comes with access to online files and software that will enable readers to create a virtual factory, operate it, and experiment with it. This is a valuable source of information with a useful toolkit for anyone interested in virtual manufacturing, including advanced undergraduate students, postgraduate students, and researchers.

Consultation Don Dinkmeyer, Jr., Carlson Jon, Rebecca E. Michel, 2015-12-22 The methods presented by Don Dinkmeyer Jr., Jon Carlson, and Rebecca Michel in *Consultation* are based on the assumption that problems in the home and classroom result not only from the direct actions of disruptive students but also from the expectations of teachers and parents. This newly expanded fourth edition continues the tradition of encouraging change in supposed problem children by helping authority figures recognize and alter the part they may play in exacerbating negative behavior. New additions include two all new chapters on assessment and mindfulness, multicultural and diverse case examples, as well as access to online video sessions that accompany the text.

Positive Learning Environments John De Nobile, Gordon Lyons (Lecturer and researcher), Michael Arthur-Kelly, 2017-04-05 How do you create a learning environment that's productive one where students are engaged, learning, and happy? And how do you ensure that inappropriate behaviours are kept to a minimum? This exciting new text introduces the key concepts you need to know to create and maintain your classroom as a positive learning environment. It begins by introducing four essential components that are the cornerstones of creating a positive, productive learning environment.
