

Exercice 1 Les propriétés optiques

- > Les propriétés optiques des cellules
 - > Les membranes sont semi-perméables
 - > Elles se caractérisent également, par leurs propriétés de structure et fonction
- > Elles ont les propriétés optiques d'objets transparents
- > Les cells. sont éclairées par leur lumière transmise

Exercice 2 La microscopie lumineuse et électronique (la mise en application)

- > Les microscopie sont des outils de l'analyse de la structure et de la fonction des cellules
- > En optique (microscopie LM), visible light passe through the specimen and then through glass lenses
 - > The lenses collect light such that the image is magnified and the light is sent to a video system
- > Microscopie may be magnification and resolving power
 - > Magnification is the amount an object is enlarged in the final image
 - > Resolving power is a measure of image clarity
 - > It is the minimum size of two points that can be separated and still be distinguished as two separate points
 - > Resolution is limited by the shortest wavelength of the radiation used for imaging
- > The maximum resolution of a light microscope is about 0.2 micrometers (nm), the size of a small bacterium
- > Light microscopes can magnify effectively for about 1,000 times the size of the actual specimen
 - > At higher magnifications, the resolution
- > Structures revealed in the LM including those without distinct well-defined particles and components to be resolved or labeled as they exist in life
- > Since a light microscope can resolve individual cells, it cannot resolve much of the internal structure, especially the organelles
- > To reveal smaller structures, we use an electron microscope (EM), which focuses a beam of electrons through the specimen or onto the surface
 - > Because electrons is indirectly related to wavelength, used electron microscopes reveal smaller features than physical wavelengths than visible light have lower resolution
 - > Consequently, the resolution of a typical EM could reach 0.0001 micrometer (nm), but the practical limit is about 0.1 nm
- > Transmission electron microscope (TEM) can reveal details to study the structure of cells
 - > In TEM, an electron beam through a thin section of the specimen
 - > The image is focused and magnified by electromagnetic
