## **Failure to Connect** Jane M.

Healy,1999-07-13 In this comprehensive practical and unsettling look at computers in children s lives Jane M Healy Ph D questions whether computers are really helping or harming children s development Once a bedazzled enthusiast of educational computing but now a troubled skeptic Dr Healy examines the advantages and drawbacks of computer use for kids at home and school exploring its effects on children s health creativity brain development and social and emotional growth Today the Federal Government allocates scarce educational funding to wire every classroom to the Internet software companies churn out educational computer programs even for preschoolers and school administrators cut funding and space for books the arts and physical education to make room for new computer hardware It is past the time to address these issues Many parents and even some educators have been sold on the idea that computer literacy is as important as reading and math Those who haven t hopped on the techno bandwagon are left wondering whether they are shortchanging their children s education or their students futures Few people stop to consider that computers used incorrectly may do far more harm than good New technologies can be valuable educational tools when used in age appropriate ways by properly trained teachers But too often schools budget insufficiently for teacher training and technical support Likewise studies suggest that few parents know how to properly assist children s computer learning much computer time at home may be wasted time drawing children away from other developmentally important activities such as reading hobbies or creative play Moreover Dr Healy finds that much so called learning software is more edutainment than educational teaching students more about impulsively pointing and clicking for some trivial goal than about how to think to communicate to imagine or to solve problems Some software used without careful supervision may also have the potential to interrupt a child s internal

motivation to learn Failure to Connect is the first book to link children's technology use to important new findings about stages of child development and brain maturation which are clearly explained throughout It illustrates through dozens of concrete examples and guidelines how computers can be used successfully with children of different age groups as supplements to classroom curricula as research tools or in family projects Dr Healy issues strong warnings however against too early computer use recommending little or no exposure before age seven when the brain is primed to take on more abstract challenges She also lists resources for reliable reviews of child oriented software suggests questions parents should ask when their children are using computers in school and discusses when and how to manage computer use at home Finally she offers a thoughtful look at the question of which skills today's children will really need for success in a technological future and how they may best acquire them Based on years of research into learning and hundreds of hours of interviews and observations with school administrators teachers parents and students Failure to Connect is a timely and eye opening examination of the central questions we must confront as technology increasingly influences the way we educate our children

*Rethinking Classroom Management* Patricia Sequeira Belvel, Maya Marcia Jordan, 2003 This is the sort of book that should be given free to every teacher as they walk through the door of their first classroom It is both inspirational and practical and will be lapped up by teachers who have still not forgotten that their pupils are people first and SATS levels

second The book is well presented and incorporates children s work into the text I love the idea of using a two inch voice when working in a group very effectively The fact that it is American doesn t bother me at all What bothers me more is that the fact that it is American will be used as an excuse by some educators in the UK to at best ignore the book and at worst attempt to ridicule it So all good stuff in a nutshell a book which is basically about empowering children to have a say in their own learning Lady Plowden must be cheering in her grave Nurturing Potential Tomorrow s leaders will be reflections of today s teachers The ideal classroom consists of a positive relationship between teacher and students producing a harmonious environment resulting in beneficial mutual fulfillment In this empowering new book Patricia Sequeira Belvel and Marcia Jordan demonstrate successful methods to achieve tranquility while transforming managerial teachers into leaders in the classroom Educators are enlightened by classroom and personal connections enabling the teacher to be immersed in real life classroom situations and encouraging the reader to create a meaningful connection from their personal experiences Key topics that help guide the readers through this transformation are Intrinsic motivation and personal beliefs and values as aids to making the shift from manager to leader Prevention strategies creating a caring community of learners Temporary intervention techniques that effectively differentiate between discipline and punishment Problem solving strategies to help the student take initiative in creating constructive solutions for all Rethinking Classroom Management is an innovative guide in which these resourceful authors illustrate an approach which has been used by successful educators for years enabling teachers to evolve effectively into leaders and to create classrooms where students are more self managing demonstrating mutual respect self esteem and responsibility

*Virtual Learning* John Cuthell,2017-11-01

This title was first published in 2001 Since the early 1980s successive governments have realized the importance of computers and computing and made significant investment in schools The most recent initiative the National Grid for Learning seeks to place online learning facilities at the heart of the curriculum for both teachers and students and use it as a vehicle for lifelong learning The impact of ICT in the classroom transforms management organization and conventional pedagogic approaches However many teachers still struggle with ICT in the classroom Since the mid 1990s a significant number of students have gained access to a PC at home They ways in which they have learnt to use machines and the uses to which they are put are shaped by input from peers and personal experience other than teachers The education systems struggle to meet the demands and expectations of these young people and those without technology at home are doubly disadvantaged if their schools and teachers cannot compensate In this research the author examines patters of computer ownership and use among young people as well as teacher use and teacher attitudes The results demonstrate the disparity between student computer ownership and use and that of their teachers with profound implications for the education system as a whole
