Computer Networks Behrouz A. Forouzan, 2011      *Computer Networks* Behrouz A. Forouzan, Firouz Mosharraf, 2012

This new networking text follows a top down approach. The presentation begins with an explanation of the application layer which makes it easier for students to understand how network devices work and then with the students fully engaged the authors move on to discuss the other layers ending with the physical layer. With this top down approach its thorough treatment of the topic and a host of pedagogical features this new networking book offers the market something it hasn't had for many years: a well-crafted modern text that places the student at the center of the learning experience. Forouzan's *Computer Networks* presents a complex topic in an accessible student-friendly way that makes learning the material not only manageable but fun as well. The appealing visual layout combines with numerous figures and examples to provide multiple routes to understanding. Students are presented with the most up-to-date material currently available and are encouraged to view what they are learning in a real-world context. This approach is both motivating and practical in that students begin to see themselves as the professionals they will soon become.

All principles are presented in a lucid logical step-by-step manner. As much as possible the authors avoid wordiness and giving too much detail that could hide concepts and impede overall understanding of the material. Ten review questions in the form of multiple-choice objective items are provided at the end of each chapter with answers. The review questions are intended to cover the little tricks which the examples and end-of-chapter problems may not cover. They serve as a self-test device and help students determine how well they have mastered the chapter.

Forouzan, 2012-02-17 **Data Communications and Networking** is designed to help students understand the basics of data communications and networking and the protocols used in the Internet in particular by using the protocol layering of the Internet and TCP/IP protocol suite. Technologies related to data communication and networking may be the fastest growing in today's culture. The appearance of some new social networking applications is a testimony to this claim. In this Internet-oriented society, specialists need to be trained to run and manage the Internet part of the Internet or an organization's network that is connected to the Internet. As both the number and types of students are increasing, it is essential to have a textbook that provides coverage of the latest advances while presenting the material in a way that is accessible to students with little or no background in the field. Using a bottom-up approach, **Data Communications and Networking** presents this highly technical subject matter without relying on complex formulas by using a strong pedagogical approach supported by more than 830 figures. Now in its Fifth Edition, this textbook brings the beginning student right to the forefront of the latest advances in the field while presenting the fundamentals in a clear, straightforward manner. Students will find better coverage, improved figures, and better explanations on cutting-edge material. The bottom-up approach allows instructors to cover the material in one course rather than having separate courses on data communications and networking.
