Computer Aided And Integrated Manufacturing Systems (A 5-volume Set) - Volume 5: Manufacturing Processes Cornelius T Leondes,2003-09-29 This is an invaluable five volume reference on the very broad and highly significant subject of computer aided and integrated manufacturing systems It is a set of distinctly titled and well harmonized volumes by leading experts on the international scene The techniques and technologies used in computer aided and integrated manufacturing systems have produced and will no doubt continue to produce major annual improvements in productivity which is defined as the goods and services produced from each hour of work This publication deals particularly with more effective utilization of labor and capital especially information technology systems Together the five volumes treat comprehensively the major techniques and technologies that are involved

Product Design for the Environment Fabio Giudice,Guido La Rosa,Antonino Risitano,2006-01-13 In recent years the increased awareness of environmental issues has led to the development of new approaches to product design known as Design for Environment and Life Cycle Design Although still considered emerging and in some cases radical their principles will become by necessity the wave of the future in design A thorough exploration of the subject *Product Design for the Environment A Life Cycle Approach* presents key concepts basic design frameworks and techniques and practical applications It identifies effective methods and tools for product design stressing the environmental performance of products over their whole life cycle After introducing the concepts of Sustainable Development the authors discuss Industrial Ecology and Design for Environment as defined in the literature They present the life cycle theory and approach explore how to apply it and define its main techniques The book then covers the main premises of product design and development delineating how to effectively integrate environmental aspects in modern product design The authors pay particular attention to environmental strategies that can aid the achievement of the requisites of eco efficiency in various phases of the product life cycle They go on to explore how these strategies are closely related to the functional performance of the product and its components and therefore to some aspects of conventional engineering design The book also introduces phenomena of performance deterioration together with principles of design for component durability and methods for the assessment of residual life Finally the book defines entirely new methods and tools in relation to strategic issues of Life Cycle Design Each theme provides an introduction to the problems and original proposals based on the authors experience

Productivity Debate Alex H.B. Duffy, 2012-12-06 Over the past decade with greater emphasis being placed upon shorter lead times better quality products reduced product costs and greater customer satisfaction the topic of Engineering Design has received increased interest from the industrial and academic communities Considerable effort has been directed at developing design process methodologies and building computer tools that focus upon relatively narrow aspects of design but many key problems in Engineering Design research and practice remain unanswered Resulting from the First International Engineering Design Debate held in Glasgow UK in late 1996 this volume discusses the main issues concerning the improvement of design productivity Covering design studies design development concurrent engineering and design knowledge and information it attempts to derive a common understanding of the basic factors problems and potential solutions involved Knowledge Intensive Computer Aided Design Susan Finger, Tetsuo Tomiyama, Martti

Mäntylä, 2013-03-09 Computer Aided Design CAD technology plays a key role in today's advanced manufacturing environment To reduce the time to market achieve zero defect quality the at first production and use available production and logistics resources effectively product and design process knowledge covering the whole product life cycle must be used throughout product design Once generated this intensive design knowledge should be made available to later life cycle activities Due to the increasing concern about global environmental issues and rapidly changing economical situation worldwide design must exhibit high performance not only in quality and productivity but also in life cycle issues including extended producer's liability This requires designers and engineers to use various kinds of design knowledge intensively during product design and to generate design information for use in later stages of the product life cycle such as production distribution operation maintenance reclamation and recycling Therefore future CAD systems must incorporate product and design process knowledge which is not explicitly dealt with in the current systems in their design tools and design object models **Advances in Concurrent Engineering** Parisa Ghodous, Pravir K.
