A Biography of the Pixel Alvy Ray Smith, 2021-08-03. The pixel as the organizing principle of all pictures from cave paintings to Toy Story. The Great Digital Convergence of all media types into one universal digital medium occurred with little fanfare at the recent turn of the millennium. The bit became the universal medium and the pixel a particular packaging of bits conquered the world. Henceforward nearly every picture in the world would be composed of pixels: cell phone pictures, app interfaces, Mars Rover transmissions, book illustrations, videogames. In *A Biography of the Pixel*, Pixar cofounder Alvy Ray Smith argues that the pixel is the organizing principle of most modern media and he presents a few simple but profound ideas that unify the dazzling varieties of digital image making. Smith's story of the pixel's development begins with Fourier waves, proceeds through Turing machines, and ends with the first digital movies from Pixar, DreamWorks, and Blue Sky. Today almost all the pictures we encounter are digital, mediated by the pixel and irretrievably separated from their media museums and kindergartens are two of the last outposts of the analog. Smith explains engagingly and accessibly how pictures composed of invisible stuff become visible: that is how digital pixels convert to analog display elements. Taking the special case of digital movies to represent all of Digital Light, his term for pictures constructed of pixels, and drawing on his decades of work in the field, Smith approaches his subject from multiple angles: art, technology, entertainment business, and history. *A Biography of the Pixel* is essential reading for anyone who has watched a video on a cell phone, played a videogame, or seen a movie. 400 pages of annotations prepared by the author and available online provide an invaluable resource for readers.

The Palgrave Handbook of Intermediality Jørgen Bruhn, Asun López-Varela, Azcárate, Miriam de Paiva Vieira, 2023-12-01. This handbook provides an extensive overview of traditional and emerging research areas within the field of intermediality studies, understood broadly as the study of interrelations among all forms of communicative media types, including transmedial phenomena. Section I offers accounts of the development of the field of intermediality, its histories, theories, and methods. Section II and III then explore intermedial facets of communication from ancient times until the 21st century, with discussion on a wide range of cultural and geographical settings, media types, and topics by contributors from a diverse set of disciplines. It concludes in Section IV with an emphasis on urgent societal issues that an intermedial perspective might help understand.

Remote Sensing Digital Image Analysis John A. Richards, 2022-01-06. *Remote Sensing Digital Image Analysis* provides a comprehensive treatment of the methods used for the processing and interpretation of

remotely sensed image data Over the past decade there have been continuing and significant developments in the algorithms used for the analysis of remote sensing imagery even though many of the fundamentals have substantially remained the same As with its predecessors this new edition again presents material that has retained value but also includes newer techniques covered from the perspective of operational remote sensing The book is designed as a teaching text for the senior undergraduate and postgraduate student and as a fundamental treatment for those engaged in research using digital image analysis in remote sensing The presentation level is for the mathematical non specialist Since the very great number of operational users of remote sensing come from the earth sciences communities the text is pitched at a level commensurate with their background The chapters progress logically through means for the acquisition of remote sensing images techniques by which they can be corrected and methods for their interpretation The prime focus is on applications of the methods so that worked examples are included and a set of problems conclude each chapter **Real-Time Rendering,**

Fourth Edition Tomas Akenine-Möller, Eric Haines, Naty Hoffman, 2018-08-06 Thoroughly updated this fourth edition focuses on modern techniques used to generate synthetic three dimensional images in a fraction of a second With the advent of programmable shaders a wide variety of new algorithms have arisen and evolved over the past few years This edition discusses current practical rendering methods used in games and other applications It also presents a solid theoretical framework and relevant mathematics for the field of interactive computer graphics all in an approachable style New to this edition new chapter on VR and AR as well as expanded coverage of Visual Appearance Advanced Shading Global Illumination and Curves and Curved Surfaces **Atlas of Digital Architecture** Ludger Hovestadt, Urs Hirschberg, Oliver Fritz, 2020-10-26

Digital technology and architecture have become inseparable with new approaches and methodologies not just affecting the workflows and practice of architects but shaping the very character of architecture This compendious work offers a wide ranging orientation to the new landscape with its opportunities its challenges and its vast potential

it has traditionally been seen as a means of documenting an external reality or expressing an internal feeling photography is now capable of actualizing never existed pasts and never lived experiences Thanks to the latest photographic technologies we can now take photos in computer games interpolate them in extended reality platforms or synthesize them via artificial intelligence To account for the most recent shifts in conceptualizations of photography this book proposes the term virtual photography as a binding theoretical framework defined as a photography that retains the efficiency and function of real photography made with or without a camera while manifesting these in an unfamiliar or noncustomary form **Course**
