an intermediate level CAMWorks user Basic concepts and commands introduced include extracting machinable features such as 2 5 axis features selecting machine and tools defining machining parameters such as feed rate generating and simulating toolpaths and post processing CL data to output G codes for support of CNC machining The concepts and commands are introduced in a tutorial style presentation using simple but realistic examples Both milling and turning operations are included One of the unique features of this book is the incorporation of the CL cutter location data verification by reviewing the G codes generated from the toolpaths This helps you understand how the G codes are generated by using the respective post processors which is an important step and an ultimate way to confirm that the toolpaths and G codes generated are accurate and useful This book is intentionally kept simple It primarily serves the purpose of helping you become familiar with CAMWorks in conducting virtual machining for practical applications This is not a reference manual of CAMWorks You may not find everything you need in this book for learning CAMWorks But this book provides you with basic concepts and steps in using the software as well as discussions on the G codes generated After going over this book you will develop a clear understanding in using CAMWorks for virtual machining simulations and should be able to apply the knowledge and skills acquired to carry out machining assignments and bring machining consideration into product design in general Who this book is for This book should serve well for self learners A self learner should have a basic physics and mathematics background We assume that you are familiar with basic manufacturing processes especially milling and turning In addition we assume you are familiar with G codes A self learner should be able to complete the ten lessons of this book in about forty hours This book also serves well for class instructions Most likely it will be used as a supplemental reference for courses like CNC Machining Design and Manufacturing Computer Aided Manufacturing or Computer Integrated Manufacturing This book should cover four to five weeks of class instructions depending on the course arrangement and the technical background of the students What is virtual machining Virtual machining is the use of simulation based technology in particular computer aided manufacturing CAM software to aid engineers in defining simulating and visualizing machining operations for parts or assembly in a computer or virtual environment By using virtual machining the machining process can be defined and verified early in the product design stage Some if not all of the less desirable design features in the context of part manufacturing such as deep pockets holes or fillets of different sizes or cutting on multiple sides can be detected and addressed while the product design is still being finalized In addition machining related problems such as undesirable surface finish surface gouging and tool or tool holder colliding with stock or fixtures can be identified and eliminated before mounting a stock on a CNC machine at shop floor In addition manufacturing cost which constitutes a significant portion of the product cost can be estimated using the machining time estimated in the virtual machining simulation Virtual machining allows engineers to conduct machining process planning generate machining toolpaths visualize and simulate machining operations and estimate machining time Moreover the toolpaths generated can be converted into NC codes to machine functional parts as well as die

or mold for part production In most cases the toolpath is generated in a so called CL data format and then converted to G codes using respective post processors [Antisemitism on Social Media](#) Monika Hübscher, Sabine von Mering, 2022-03-22

Antisemitism on Social Media is a book for all who want to understand this phenomenon Researchers interested in the matter will find innovative methodologies CrowdTangle or Voyant Tools mixed with discourse analysis and new concepts tertiary antisemitism antisemitic escalation that should become standard in research on antisemitism on social media It is also an invitation to students and up and coming and established scholars to study this phenomenon further This interdisciplinary volume addresses how social media with its technology and business model has revolutionized the dissemination of antisemitism and how this impacts not only victims of antisemitic hate speech but also society at large The book gives insight into case studies on different platforms such as Twitter Facebook TikTok YouTube and Telegram It also demonstrates how social media is weaponized through the dissemination of antisemitic content by political actors from the right the left and the extreme fringe and critically assesses existing counter strategies People working for social media companies policy makers practitioners and journalists will benefit from the questions raised the findings and the recommendations Educators who teach courses on antisemitism hate speech extremism conspiracies and Holocaust denial but also those who teach future leaders in computer technology will find this volume an important resource **Disinformation** Lisa Ginsborg, Paula Gori, 2026-02-10 This volume provides a multidisciplinary analysis of disinformation and strategies for tackling it Authored by a diverse group of scholars and experts chapters in this volume are divided into three thematic sections The first section delves into disinformation from various disciplinary perspectives including philosophy social psychology economics international law data science anthropology political science and history By examining the underlying factors behind disinformation and analyzing its impact on democratic processes this section sheds light on its complexities and reminds us that different policy responses are always grounded in different explanatory angles of the phenomenon The second section focuses on the information ecosystem investigating the processes technologies and actors involved in the spread of disinformation By examining real world examples and the roles played by different actors and technologies this sheds light on the intricate workings of disinformation in different thematic and regional contexts The book culminates in the third section which focuses on crafting effective responses to disinformation Chapters in this section explore policy efforts aimed at ensuring information integrity across the world and highlight the importance of fundamental rights and evidence based policy responses encompassing self and co regulation quality journalism fact checking organizations and the pivotal role media literacy initiatives [Trans Cinema](#) Laura Horak, 2026 An exciting introduction to cinema by the trans creators who are innovating filmmaking to imagine a more inclusive world Since the 1990s a largely underground upwelling of trans creativity has helped new trans identities communities and political movements come together In Trans Cinema Laura Horak provides an entryway to the wildly diverse and creative cinema made by trans creators including those who are Black

Indigenous and people of color Overlooked until now this rich collection of media ranges in genre from romantic comedies to horror films and asks essential questions about how to be human and how to craft a livable life in a world on fire Using the fundamentals of film studies Horak reveals the innovative approaches taken by trans and gender nonconforming artists to explore how we relate to other people what it's like to have a body and how we survive in an oppressive society These filmmakers tackle the challenging paradox of representing trans lives when greater visibility is associated with ever increasing levels of harm In the process they produce art that emphasizes trans survival and resilience and imagines a more expansive world for trans communities *Police Body-Worn Cameras* Christopher J. Schneider, Erick Laming, 2026-01-22 Focusing on discourses surrounding the introduction and use of body worn cameras this book contends that the principal catalyst for equipping frontline officers with cameras is linked to media narratives concerning beliefs about their effectiveness in bringing about police reform Although research testing the efficacy of body cameras is inconsistent law enforcement agencies continue to adopt and use body worn cameras on the premise that the technology will increase and enhance accountability and transparency The authors argue that the police and public do not have shared definitions or expectations associated with the terms accountability and transparency but that these ideas appear frequently across media narratives in relation to police reform Police Body Worn Cameras Media and the New Discourse of Police Reform details how the new discourse obfuscates the clashing expectations and goals of police and publics ensuring that transparency and accountability remain aspirational public concepts with no enshrined legal or policy parameters that bolster the legitimacy of policing as an institution This book will appeal to scholars and students of criminology sociology media studies and policing
