## **Commonsense Reasoning Second Edition An Event Calculus Based Approach:**

*Commonsense Reasoning* Erik T. Mueller, 2014-11-11 To endow computers with common sense is one of the major long term goals of artificial intelligence research. One approach to this problem is to formalize commonsense reasoning using mathematical logic. *Commonsense Reasoning An Event Calculus Based Approach* is a detailed high level reference on logic based commonsense reasoning. It uses the event calculus a highly powerful and usable tool for commonsense reasoning which Erik Mueller demonstrates as the most effective tool for the broadest range of applications. He provides an up to date work promoting the use of the event calculus for commonsense reasoning and bringing into one place information scattered across many books and papers. Mueller shares the knowledge gained in using the event calculus and extends the literature with detailed event calculus solutions that span many areas of the commonsense world. The Second Edition features new chapters on commonsense reasoning using unstructured information including the Watson system commonsense reasoning using answer set programming and techniques for acquisition of commonsense knowledge including crowdsourcing. Understand techniques for automated commonsense reasoning. Incorporate commonsense reasoning into software solutions. Acquire a broad understanding of the field of commonsense reasoning. Gain comprehensive knowledge of the human capacity for commonsense reasoning.

**Robotics and Well-Being** Maria Isabel Aldinhas Ferreira, João Silva Sequeira, Gurvinder Singh Virk, Mohammad Osman Tokhi, Endre E. Kadar, 2019-04-16 This book highlights some of the most pressing safety ethical legal and societal issues related to the diverse contexts in which robotic technologies apply Focusing on the essential concept of well being it addresses topics that are fundamental not only for research but also for industry and end users discussing the challenges in a wide variety of applications including domestic robots autonomous manufacturing personal care robots and drones

**The Oxford Handbook of Ethics of AI** Markus D. Dubber, Frank Pasquale, Sunit Das, 2020-06-30 This volume tackles a quickly evolving field of inquiry mapping the existing discourse as part of a general attempt to place current developments in historical context at the same time breaking new ground in taking on novel subjects and pursuing fresh approaches The term A I is used to refer to a broad range of phenomena from machine learning and data mining to artificial general intelligence The recent advent of more sophisticated AI systems which function with partial or full autonomy and are capable of tasks which require learning and intelligence presents difficult ethical questions and has drawn concerns from many quarters about individual and societal welfare democratic decision making moral agency and the prevention of harm This work ranges from explorations of normative constraints on specific applications of machine learning algorithms today in everyday medical practice for instance to reflections on the potential status of AI as a form of consciousness with attendant rights and duties and more generally still on the conceptual terms and frameworks necessarily to understand tasks requiring intelligence whether human or A I

*Chronicles: Formalization of a Temporal Model* Thomas Guyet, Philippe Besnard, 2023-07-25 This book is intended as an introduction to a versatile model for temporal data It exhibits an original lattice structure on the space of chronicles and proposes new counting approach for multiple occurrences of chronicle occurrences This book also proposes a new approach for frequent temporal pattern mining using pattern structures This book was initiated by the work of Ch Dousson in the 1990s At that time the prominent format was Temporal Constraint Networks for which the article by Richter Meiri and Pearl is seminal Chronicles do not conflict with temporal constraint networks they are closely related Not only do they share a similar graphical representation they also have in common a notion of constraints in the timed succession of events However

chronicles are definitely oriented towards fairly specific tasks in handling temporal data by making explicit certain aspects of temporal data such as repetitions of an event. The notion of chronicle has been applied both for situation recognition and temporal sequence abstraction. The first challenge benefits from the simple but expressive formalism to specify temporal behavior to match in a temporal sequence. The second challenge aims to abstract a collection of sequences by chronicles with the objective to extract characteristic behaviors. This book targets researchers and students in computer science from logic to data science. Engineers who would like to develop algorithms based on temporal models will also find this book useful.

**Machines like Us** Ronald J. Brachman, Hector J. Levesque, 2023-10-17 How we can create artificial intelligence with broad robust common sense rather than narrow specialized expertise. It's sometime in the not so distant future and you send your fully autonomous self driving car to the store to pick up your grocery order. The car is endowed with as much capability as an artificial intelligence agent can have programmed to drive better than you do. But when the car encounters a traffic light stuck on red it just sits there indefinitely. Its obstacle avoidance lane following and route calculation capacities are all irrelevant it fails to act because it lacks the common sense of a human driver who would quickly figure out what's happening and find a workaround. In *Machines like Us* Ron Brachman and Hector Levesque both leading experts in AI consider what it would take to create machines with common sense rather than just the specialized expertise of today's AI systems. Using the stuck traffic light and other relatable examples Brachman and Levesque offer an accessible account of how common sense might be built into a machine. They analyze common sense in humans explain how AI over the years has focused mainly on expertise and suggest ways to endow an AI system with both common sense and effective reasoning. Finally they consider the critical issue of how we can trust an autonomous machine to make decisions identifying two fundamental requirements for trustworthy autonomous AI systems having reasons for doing what they do and being able to accept advice. Both in the end are dependent on having common sense.

Hector J. Levesque,1999-06-07 It is a pleasure and an honor to be able to present this collection of papers to Ray Reiter on the occasion of his 60th birthday To say that Ray's research has had a deep impact on the field of Artificial Intelligence is a considerable understatement Better to say that anyone thinking of doing work in areas like deductive databases default reasoning diagnosis reasoning about action and others should realize that they are likely to end up proving corollaries to Ray's theorems Sometimes studying related work makes us think harder about the way we approach a problem studying Ray's work is as likely to make us want to drop our way of doing things and take up his This is because more than a mere visionary Ray has always been a true leader He shows us how to proceed not by pointing from his armchair but by blazing a trail himself setting up camp and waiting for the rest of us to arrive The International Joint Conference on Artificial Intelligence clearly recognized this and awarded Ray its highest honor the Research Excellence award in 1993 before it had even finished acknowledging all the founders of the field The papers collected here sample from many of the areas where Ray has done pioneering work One of his earliest areas of application was databases and this is reflected in the chapters by Bertossi et al and the survey chapter by Minker Signal Processing, Sensor Fusion, and Target Recognition ,1999 **Publicaciones de**
