Computer Manual in MATLAB to accompany Pattern Classification David G. Stork, Elad Yom-Tov, 2004-04-08

Computer Manual to Accompany Pattern Classification and its associated MATLAB software is an excellent companion to Duda Pattern Classification 2nd ed DH S The code contains all algorithms described in Duda as well as supporting algorithms for data generation and visualization The Manual uses the same terminology as the DH S text and contains step by step worked examples including many of the examples and figures in the textbook The Manual is accompanied by software that is available electronically The software contains all algorithms in DH S indexed to the textbook and uses symbols and notation as close as possible to the textbook The code is self annotating so the user can easily navigate understand and modify the code

Pattern Classification Richard O. Duda, Peter E. Hart, David G. Stork, 2012-11-09 The first edition published in 1973 has become a classic reference in the field Now with the second edition readers will find information on key new topics such as neural networks and statistical pattern recognition the theory of machine learning and the theory of invariances Also included are worked examples comparisons between different methods extensive graphics expanded exercises and computer project topics An Instructor's Manual presenting detailed solutions to all the problems in the book is available from the Wiley editorial department

Hybrid Classifiers Michal Wozniak, 2013-09-16 This book delivers a definite and compact knowledge on how hybridization can help improving the quality of computer classification systems In order to make readers clearly realize the knowledge of hybridization this book primarily focuses on introducing the different levels of hybridization and illuminating what problems we will face with as dealing with such projects In the first instance the data and knowledge incorporated in hybridization were the action points and then a still growing up area of classifier systems known as combined classifiers was considered This book comprises the aforementioned state of the art topics and the latest research results of the author and his team from Department of Systems and Computer Networks Wroclaw University of Technology including as classifier based on feature space splitting one class classification imbalance data and data stream classification

Estimating the Query Difficulty for Information Retrieval David Carmel, Elad Yom-Tov, 2022-05-31 Many information retrieval IR systems suffer from a radical variance in performance when responding to users queries Even for systems that succeed very well on average the quality of results returned for some of the queries is poor Thus it is desirable that IR systems will be able to identify difficult queries so they can be handled properly Understanding why some queries are inherently more difficult than others is essential for IR and a good answer to this important question will help search engines to reduce the variance in performance hence better servicing their customer needs Estimating the query difficulty is an attempt to quantify the quality of search results retrieved for a query from a given collection of documents This book discusses the reasons that cause search engines to fail for some of the queries and then reviews recent approaches for estimating query difficulty in the IR field It then describes a common methodology for evaluating the prediction quality of

those estimators and experiments with some of the predictors applied by various IR methods over several TREC benchmarks Finally it discusses potential applications that can utilize query difficulty estimators by handling each query individually and selectively based upon its estimated difficulty Table of Contents Introduction The Robustness Problem of Information Retrieval Basic Concepts Query Performance Prediction Methods Pre Retrieval Prediction Methods Post Retrieval Prediction Methods Combining Predictors A General Model for Query Difficulty Applications of Query Difficulty Estimation Summary and Conclusions Biomedical Signal Processing Neeraj Vyas,2011
