Computer Processing of Electron Microscope Images P. W. Hawkes, 2012-12-06 Towards the end of the 1960s a number of quite different circumstances combined to launch a period of intense activity in the digital processing of electron micrographs. First many years of work on correcting the resolution limiting aberrations of electron microscope objectives had shown that these optical impediments to very high resolution could indeed be overcome but only at the cost of immense experimental difficulty thanks largely to the theoretical work of K J Hanszen and his colleagues and to the experimental work of F Thon the notions of transfer functions were beginning to supplant or complement the concepts of geometrical optics in electron optical thinking and finally large fast computers capable of manipulating big image matrices in a reasonable time were widely accessible. Thus the idea that recorded electron microscope images could be improved in some way or rendered more informative by subsequent computer processing gradually gained ground. At first most effort was concentrated on three dimensional reconstruction particularly of specimens with natural symmetry that could be exploited and on linear operations on weakly scattering specimens Chap 1. In 1973 however R W Gerchberg and W O Saxton described an iterative algorithm that in principle yielded the phase and amplitude of the electron wave emerging from a strongly scattering specimen.

Computer Processing of Electron Microscope Images P W Hawkes, J Frank, 1980-01-01 **Electron Microscopy in Microbiology**, 1988-10-01 This volume of this acclaimed series deals with electron microscopic techniques applied for the elucidation of microbial structures and structure function relationships at cellular sub cellular and macromolecular levels. Many of the recent findings on ultrastructural features of microorganisms have been obtained with newly developed methods though classical approaches have not lost their validity. Therefore both conventional and new methods have been incorporated into this volume. The topics dealt with are meaningful not only in bacterial cytology but also in physiology, enzymology, biochemistry and molecular biology and include aspects of medical and biotechnological application.

Image Sequence Analysis T. S. Huang, 2013-11-11 The processing of image sequences has a broad spectrum of important applications including target tracking, robot navigation, bandwidth compression of TV conferencing video signals, studying the motion of biological cells using microcinematography, cloud tracking and highway traffic monitoring. Image sequence processing involves a large amount of data. However, because of the progress in computer LSI and VLSI technologies we have now reached a stage when many useful processing tasks can be done in a reasonable amount of time. As a result, research and development activities in image sequence analysis have recently been growing at a rapid pace. An IEEE Computer Society Workshop on Computer Analysis of Time Varying Imagery was held in Philadelphia April 5-6 1979. A related special issue of the IEEE Transactions on Pattern Analysis and Machine Intelligence was published in November 1980. The IEEE Computer magazine has also published a special issue on the subject in 1981. The purpose of this book is to survey the field of image sequence analysis and to discuss in depth a number of important selected topics. The seven chapters fall into two categories

Chapters 2 3 and 7 are comprehensive surveys on respectively the whole field of image sequence analysis efficient coding of image sequences and the processing of medical image sequences In Chapters 1 4 5 and 6 the authors present mainly results of their own research on respectively motion estimation noise reduction in image sequences moving object extraction and occlusion *Optics in Biomedical Sciences* G.v. Bally,P. Greguss,2013-06-05 As there recently has been increased interest in the applications of optical techniques in biomedical research and clinical diagnostics it seemed to be appropriate to organize a comprehensive international conference on optics in medicine and biology Such a broad international meeting had not been held before An international conference on Optics in Biomedical Sciences was organized and took place in Graz Austria September 7th through 11th 1981 sponsored by the International Commission for Optics ICO in co operation with the European Optical Committee the Austrian Association on Biomedical Engineering and the German Society for Applied Optics It seemed timely to establish a forum for communication among specialists on an international level This book presenting the papers given at this conference demonstrates the state of the art of this increasingly expanding field of applications of optics Furthermore the interested reader will find an extended list of references in the various contributions This book helps to overcome the difficulty inherent in all interdisciplinary research fields of gathering widely scattered literature The contributions to this book are focussed on the following topics Biomedical applications of unconventional imaging in microscopy image processing interferometry and holography speckle techniques and spectroscopy optometry and Moire methods In addition the brilliant and humorous closing remarks of Nils Abramson from the Royal Institute of Technology Stockholm have been included **Digital Pattern Recognition** K. S. Fu,2013-03-07 Since its publication in 1976 the original volume has been warmly received We have decided to put out this updated paperback edition so that the book can be more accessible to students This paperback edition is essentially the same as the original hardcover volume except for the addition of a new chapter Chapter 7 which reviews the recent advances in pattern recognition and image processing Because of the limitations of length we can only report the highlights and point the readers to the literature A few typographical errors in the original edition were corrected We are grateful to the National Science Foundation and the Office of Naval Research for supporting the editing of this book as well as the work described in Chapter 4 and a part of Chapter 7 West Lafayette Indiana March 1980 K S Fu Preface to the First Edition During the past fifteen years there has been a considerable growth of interest in problems of pattern recognition Contributions to the blossom of this area have come from many disciplines including statistics psychology linguistics computer science biology taxonomy switching theory communication theory control theory and operations research Many different approaches have been proposed and a number of books have been published Most books published so far deal with the decision theoretic or statistical approach or the syntactic or linguistic is still far from its maturity many approach **Inverse Scattering Problems in Optics** H.P. Baltes,2012-12-06 When in the spring of 1979 H P Baltes presented me with the precursor of this volume the book on Inverse Source

Problems in Optics I expressed my gratitude in a short note which in translation reads Dear Dr Baltes the mere title of your unexpected gift evokes memories of a period which in the terminology of your own contribution would be described as the Stone Age of the Inverse Problem Those were pleasant times Walter Kohn and I lived in a cave by ourselves drew pictures on the walls and nobody seemed to care Now however Inversion has become an Industry which I contemplate with as much bewilderment as a surviving Tasmanian aborigine gazing at a modern oil refinery with its towers its flares and the confusing maze of its tubes The present volume makes me feel even more aboriginal impossible for me to fathom its content What I can point out however is one of the forgotten origins of the Inverse Scattering Problem of Quantum Mechanics Werner Heisenberg's S Matrix Theory of 1943 This grandiose scheme had the purpose of eliminating the notion of the Hamiltonian in favour of the scattering operator If successful it would have done away once and for all with any kind of inverse problem
