- A crate filled with delicious junk food rests on a horizontal floor. Only gravity and the support force of the floor act on it, as shown by the vectors for weight W and normal force n .
 - The net force on the crate is (zero) (greater than zero).
 - Evidence for this is no acceleration.
- A slight pull P is exerted on the crate, not enough to move it.
 - The force of friction f acting on the crate is (less than) (equal to) (greater than) P .
 - The net force on the crate is (zero) (greater than zero).
- Pull P is increased until the crate begins to move. It is pulled so that it moves with constant velocity across the floor.
 - Friction f is (less than) (equal to) (greater than) P .
 - Constant velocity means acceleration is (zero) (greater than zero).
 - The net force on the crate is (less than) (equal to) (greater than) zero.
- Pull P is further increased and is now greater than friction f .
 - The net force on the crate is (less than) (equal to) (greater than) zero.
 - The net force acts toward the right, so acceleration acts toward the (left) (right).
- If the pulling force P is 150 N and the crate doesn't move, what is the magnitude of f ? 150 N
- If the pulling force P is 200 N and the crate doesn't move, what is the magnitude of f ? 200 N
- If the force of sliding friction is 250 N, what force is necessary to keep the crate sliding at constant velocity? 250 N
- If the mass of the crate is 50 kg and sliding friction is 250 N, what is the acceleration of the crate when the pulling force is 250 N? 0 m/s² 300 N 1 m/s² 500 N 5 m/s²

Promising Practices in Undergraduate Science, Technology, Engineering,

and Mathematics Education National Research Council,Division of Behavioral and Social Sciences and Education,Board on Science Education,Planning Committee on Evidence on Selected Innovations in Undergraduate STEM Education,2011-05-19 Numerous teaching learning assessment and institutional innovations in undergraduate science technology engineering and

mathematics STEM education have emerged in the past decade. Because virtually all of these innovations have been developed independently of one another their goals and purposes vary widely. Some focus on making science accessible and meaningful to the vast majority of students who will not pursue STEM majors or careers others aim to increase the diversity of students who enroll and succeed in STEM courses and programs still other efforts focus on reforming the overall curriculum in specific disciplines. In addition to this variation in focus these innovations have been implemented at scales that range from individual classrooms to entire departments or institutions. By 2008 partly because of this wide variability it was apparent that little was known about the feasibility of replicating individual innovations or about their potential for broader impact beyond the specific contexts in which they were created. The research base on innovations in undergraduate STEM education was expanding rapidly but the process of synthesizing that knowledge base had not yet begun. If future investments were to be informed by the past then the field clearly needed a retrospective look at the ways in which earlier innovations had influenced undergraduate STEM education. To address this need the National Research Council NRC convened two public workshops to examine the impact and effectiveness of selected STEM undergraduate education innovations. This volume summarizes the workshops which addressed such topics as the link between learning goals and evidence promising practices at the individual faculty and institutional levels classroom based promising practices and professional development for graduate students new faculty and veteran faculty. The workshops concluded with a broader examination of the barriers and opportunities associated with systemic change.

Teaching Science, 2008 **Colorado School Journal**, 1899 **Student-active Science** Ann P. McNeal, 1997 This volume emerged from an NSF sponsored conference on Inquiry Approaches to Science Teaching held at Hampshire College in June 1996. STUDENT ACTIVE SCIENCE emphasizes that experiencing the process of science is central to the learning of science. This book is a collection of articles ideas and models for science education reform and is the result of collaboration between instructors frustrated with the traditional approach to teaching. You'll find models and ideas that promote critical thinking and hands on science in the classroom as well as commentary from school wide department wide and individual reform efforts.

El-Genk, 2008-01-31 As the British French and Spanish Atlantic empires were torn apart in the Age of Revolution Portugal steadily pursued reforms to tie its American African and European territories more closely together. Eventually after a period of revival and prosperity the Luso Brazilian world also succumbed to revolution which ultimately resulted in Brazil's independence from Portugal. The first of its kind in the English language to examine the Portuguese Atlantic World in the period from 1750 to 1850 this book reveals that despite formal separation the links and relationships that survived the demise of empire entwined the historical trajectories of Portugal and Brazil even more deeply. From constitutionalism to

economic policy to the problem of slavery Portuguese and Brazilian statesmen and political writers laboured under the long shadow of empire as they sought to begin anew and forge stable post imperial orders on both sides of the Atlantic The Colorado School Journal Aaron Gove,Dorus Reuben Hatch,Harry McWhirter Barrett,Nathan B.
