**Photography Birds**, 2020-04-01 Photography Birds explains how to photograph birds whether in your backyard or at a birding destination detailing unique issues that confront photographers of all levels and providing the best guidance for capturing the beauty and splendor of our feathered friends. Gerrit Vyn an award winning bird photographer videographer and sound recorder has become renowned for his ability to capture birds especially for the prestigious Cornell Lab of Ornithology. In this new guide he reveals his methods and shares how to photograph birds based on location behavior identification and storytelling. Vyn details the range of technical considerations giving clear instruction and advice as well as the creative decisions a photographer must make on lighting framing timing and motion. He also discusses situations unique to bird photographers dealing with habituated or tame birds approaching feeders utilizing blinds and more. Once captured digital images can be digitally refined so Vyn delves into the procedures that elevate an image from mundane to striking using Adobe Lightroom. Throughout Vyn emphasizes an ethical approach to observing and interacting with the birds around us.

**Digital Wildlife Photography** John Gerlach, Barbara Gerlach, 2012 From how many frames you need to shoot per second to capture that WOW moment to where to focus on a bird with a big beak to get the best depth of field this book has it all for the wildlife photographer. It is an impressive mix of technology with just plain good advice for image taking and they discuss each point specifically for shooting wildlife because it is a totally unique type of photography. The lighting and shutter speed for a macro flower shot is not the same that you'd need for a bird in flight or a kangaroo jumping across a field. Mix together this fantastic info with the many years of experience that the Gerlachs have shooting and teaching and the absolutely jaw dropping images and you really do have a perfect storm for a book.
