Geometry Serge Lang, Gene Murrow, 1988-08-25 From the reviews A prominent research mathematician and a high school teacher have combined their efforts in order to produce a high school geometry course The result is a challenging vividly written volume which offers a broader treatment than the traditional Euclidean one but which preserves its pedagogical virtues The material included has been judiciously selected some traditional items have been omitted while emphasis has been laid on topics which relate the geometry course to the mathematics that precedes and follows The exposition is clear and precise while avoiding pedantry There are many exercises quite a number of them not routine The exposition falls into twelve chapters 1 Distance and Angles 2 Coordinates 3 Area and the Pythagoras Theorem 4 The Distance Formula 5 Some Applications of Right Triangles 6 Polygons 7 Congruent Triangles 8 Dilatations and Similarities 9 Volumes 10 Vectors and Dot Product 11 Transformations 12 Isometries This excellent text presenting elementary geometry in a manner fully corresponding to the requirements of modern mathematics will certainly obtain well merited popularity

Pre-Calculus, Calculus, and Beyond Hung-Hsi Wu,2020-10-26 This is the last of three volumes that together give an exposition of the mathematics of grades 9 12 that is simultaneously mathematically correct and grade level appropriate The volumes are consistent with CCSSM Common Core State Standards for Mathematics and aim at presenting the mathematics of K 12 as a totally transparent subject This volume distinguishes itself from others of the same genre in getting the mathematics right In trigonometry this volume makes explicit the fact that the trigonometric functions cannot even be defined without the theory of similar triangles It also provides details for extending the domain of definition of sine and cosine to all real numbers It explains as well why radians should be used for angle measurements and gives a proof of the conversion formulas between degrees and radians In calculus this volume pares the technicalities concerning limits down to the essential minimum to make the proofs of basic facts about differentiation and integration both correct and accessible to school teachers and educators the exposition may also benefit beginning math majors who are learning to write proofs An added bonus is a correct proof that one can get a repeating decimal equal to a given fraction by the long division of the numerator by the denominator This proof attends to all three things all at once what an infinite decimal is why it is equal to the fraction and how long division enters the picture This book should be useful for current and future teachers of K 12 mathematics as well as for some high school students and for education professionals
