

# AP Biology Ch 13 KEY: The Molecular Basis of Inheritance

## New Concepts:

1. **DNA** is the genetic material.
2. Many **Proteins** work together in DNA's **Replication** and repair.
3. A **Chromosome** consists of a **DNA Molecule** packed together with **Proteins** (histones).
4. Understanding DNA structure and replication makes **Genetic Engineering** possible.

## CHAPTER:

5. Prokaryotic cells are unique molecules due to their ability to **direct their own replication**.
6. In this chapter you will learn:
  - How scientists deduced that **DNA was the genetic material**
  - How DNA is **replicated** (copied)
  - How cells **repair** DNA
  - How DNA is **packed** w/**proteins** to form a chromosome.
7. The Morgan et al. group showed that **Genes** exist as parts of chromosomes. After that, the two components of chromosomes that became candidates as "the" genetic material were **DNA** and **Proteins**. Understandably, proteins were the frontrunners as they were identified as a class of macromolecules with great **heterogeneity** and **specificity** (essential characteristics for hereditary material). Nucleic acids seemed too uniform, but, this was incorrect.
8. The view of Protein's role gradually changed as the role of **DNA** in heredity was worked out in studies of **Bacteria** and the **Viruses (bacteriophages)** that infect them.
9. Concept 13.1: Discuss the experiments of the following scientists and how their experiments gave evidence for DNA as the genetic material.

Scientist	Time	Experiment (description)	Evidence gained
<b>Frederick Griffith</b> 	1928	<p>Engests mice with different forms of pneumoniae</p> <ul style="list-style-type: none"><li>-Smooth=deadly</li><li>-Rough=non-deadly</li><li>-These killed Smooth</li><li>-These killed rough=deadly</li></ul> <p>Mice killed pneumonia bacteria mixed w/ non-pathogenic in experimental group</p>	<p>Bacteriophages show the dead Smooth cells can transform the Rough bacteria into the Smooth form. Associated the DNA.</p> <p>Non-pathogenic bacteria deadly due to changes in morphology -- changes in pneumoniae</p> <p>Non-pathogenic DNA was taken up by the non-deadly that allowed it to transform into deadly.</p>
