knowledge that teachers professional knowledge is essential to effective classroom instruction. However there is still very limited understanding about the nature of teachers expertise in mathematics instruction. *Expertise in Mathematics Instruction* addresses this need clearly and concisely. In particular it examines all aspects of emphases employed to characterize the nature of expertise in mathematics instruction from both researchers and practitioners perspectives. Moreover with research contributions from both the East and the West this book also examines ideas pertinent to fostering and demonstrating expertise in mathematics instruction within different system contexts. This book will raise questions and issues for mathematics education researchers to guide a critical examination of what can be learned from other education systems. *Expertise in Mathematics Instruction* builds on its theoretical and methodological approach with contributions from international experts in the field. Additionally a review of related research from mathematics education serves as an introduction to the new research in both Eastern and Western settings. Concluding this resource is a reflection on the benefits of this international collaboration and possible research directions for the future. The final chapter cohesively joins traditional and current research for action. *Expertise in Mathematics Instruction* is of interest to researchers in mathematics education, mathematics teacher educators and mathematics educators.

Knowing and Learning Mathematics for Teaching

National Research Council, Mathematical Sciences Education Board, Center for Education, Mathematics Teacher Preparation Content Workshop Program Steering Committee, 2001-01-25. There are many questions about the mathematical preparation teachers need. Recent recommendations from a variety of sources state that reforming teacher preparation in postsecondary institutions is central in providing quality mathematics education to all students. The Mathematics Teacher Preparation Content Workshop examined this problem by considering two central questions: What is the mathematical knowledge teachers need to know in order to teach well? How can teachers develop the mathematical knowledge they need to teach well? The Workshop activities focused on using actual acts of teaching such as examining student work, designing tasks or posing questions as a medium for teacher learning. The Workshop proceedings *Knowing and Learning Mathematics for Teaching* is a collection of the papers presented the activities and plenary sessions that took place.
