,1998 **Smartfiles: An OO Approach to Data File Interoperability** Matthew Haines,Institute for Computer Applications in Science and Engineering,1995 Abstract Data files for scientific and engineering codes typically consist of a series of raw data values whose description is buried in the programs that interact with these files In this situation making even minor changes in the file structure or sharing files between programs interoperability can only be done after careful examination of the data files and the I O statements of the programs interacting with this file In short scientific data files lack self description and other self describing data techniques are not always appropriate or useful for scientific data files By applying an object oriented methodology to data files we can add the intelligence required to improve data interoperability and provide an elegant mechanism for supporting complex evolving or multidisciplinary applications while still supporting legacy codes As a result scientists and engineers should be able to share datasets with far greater ease simplifying multidisciplinary applications and greatly facilitating remote collaboration between scientists **Data Science Live Book** Pablo Casas,2018-03-16 Welcome It s a book to learn data science machine learning and data analysis with tons of examples and explanations around several topics like Exploratory data analysis Data preparation Selecting best variables Model performance Note This is the Black among others using easy copy paste pieces of code Please note that this is not a book to learn how to program R from scratch nor how algorithms are implemented math and stats area Who is the target audience It s aimed to people who are Programmers and data scientists who work or want to in machine learning projects However the

ones who don't want or don't know how to code can get some useful insights which can add value as data project analysts All the R examples are well explained in code comments No math or statistical background to understand it The book tries to be as tool independent as possible For example the decision of what to do to deal with missing or extreme values is the whether we choose R Python Julia What it changes is the how Last words To develop a critical thinking without taking any statement as the true truth it's essential in this sea of books courses videos and any technical material to learn This book is just another view in the data science perspective Hope you like it Index Exploratory data analysis Profiling The voice of the numbers Correlation and Relationship Data preparation Handling Data Types High Cardinality Variable in Descriptive Stats High Cardinality Variable in Predictive Modeling Treatment of outliers Missing Data Analysis Handling and Imputation of Considerations involving time Selecting best variables General Aspects in Selecting Best Variables Intuition The best selection The nature of the selection Improving variables Cleaning by domain knowledge Variables work in groups Correlation between input variables Keep it simple Variable selection in Clustering Selecting the best variables in practice Target profiling Assessing Model performance Knowing the Error Out of Time Validation Gain and Lift Analysis Scoring Data Appendix The magic of percentiles fun Modeling quick start
