Anyone Can Code: Algorithmic Thinking Ali Arya, 2023-11-23 As the second book in the Anyone Can Code series Algorithmic Thinking focuses on the logic behind computer programming and software design. With a data centred approach it starts with simple algorithms that work on simple data items and advances to more complex ones covering data structures and classes. Examples are given in C, C++ and Python and use both plain text and graphics applications to illustrate the concepts in different languages and forms. With the advances in artificial intelligence and automated code generators it is essential to learn about the logic of what a code needs to do not just how to write the code. *Anyone Can Code: Algorithmic Thinking* is suitable for anyone who aims to improve their programming skills and go beyond the simple craft of programming, stepping into the world of algorithm design. This book is independent of the first one in the series but assumes some basic familiarity with programming such as language syntax. 35 Kavin Na Yanq, 2021-05-29 Python
