several implementation case studies and uses Internet applications to motivate many topics such as hashing sorting and searching   *Algorithms and Data Structures* Charles F. Bowman,1994 With numerous practical real world algorithms presented in the C programming language Bowman s Algorithms and Data Structures An Approach in C is the algorithms text for courses that take a modern approach For the one or two semester undergraduate course in data structures it instructs students on the science of developing and analyzing algorithms Bowman focuses on both the theoretical and practical aspects of algorithm development He discusses problem solving techniques and introduces the concepts of data abstraction and algorithm efficiency More importantly the text does not present algorithms in a shopping list format Rather it provides actual insight into the design process itself   Algorithms and Data Structures Frank Dehne,Jörg-Rüdiger Sack,Nicola Santoro,1991 This volume presents the proceedings of the Second Workshop on Algorithms and Data Structures WADS 91 held at Carleton University in Ottawa The workshop was organized by the School of Computer Science at Carleton University The workshop alternates with the Scandinavian Workshop on Algorithm Theory SWAT continuing the tradition of SWAT 88 LNCS Vol 318 WADS 89 LNCS Vol 382 and SWAT 90 LNCS Vol 447 From 107 papers submitted 37 were selected for presentation at the workshop In addition there were 5 invited presentations PUBLISHER S WEBSITE   Data Structures, Algorithms, and Object-oriented Programming Gregory L. Hwang,D.S. Richards,P. Winter,1992-10-20 The Steiner problem asks for a shortest network which spans a given set of points Minimum spanning networks have been well studied when all connections are required to be between the given points The novelty of the Steiner tree problem is that new auxiliary points can be introduced between the original points so that a spanning network of all the points will be shorter than otherwise possible These new points are called Steiner points locating them has proved problematic and research has diverged along many different avenues This volume is devoted to the assimilation of the rich field of intriguing analyses and the consolidation of the fragments A section has been given to each of the three major areas of interest which have emerged The first concerns the Euclidean Steiner Problem historically the original Steiner tree problem proposed by Jarn k and K ssler in 1934 The second deals with the Steiner Problem in Networks which was propounded independently by Hakimi and Levin and has enjoyed the most prolific research amongst the three areas The Rectilinear Steiner Problem introduced by Hanan in 1965 is discussed in the third part Additionally a forth section has been included with chapters discussing areas where the body of results is still emerging The

collaboration of three authors with different styles and outlooks affords individual insights within a cohesive whole
