Carotenoids and Human Health Jaume Amengual, 2019-12-03 Carotenoids are a group of approximately 600 compounds synthesized by photosynthetic organisms These pigments are abundant in fruits and vegetables as well as in certain animal products such as eggs and salmon being responsible for their colorful appearance The bioactive properties of certain carotenoids in human health are clear as some of these compounds have antioxidant properties and serve as the only precursors of vitamin A in nature The aim of this Special Issue entitled Carotenoids and Human Health is to provide the scientific community with an updated perspective of this exciting and growing research area We compiled 19 papers from some of the most prominent scientists in the carotenoid field including seven literature reviews and 12 original publication covering topics such as cancer obesity vision cognitive function and skin health *Carotenoids: Importance in Human*

Nutrition and Health Julia Murphy, 2023-09-19 Carotenoids are a class of phytonutrients synthesized by plants algae and photosynthetic bacteria These richly colored molecules are responsible for the yellow orange and red colors of many fruits and vegetables Carotenoids can be broadly classified as carotenes and xanthophylls based on the chemical contained in them There are several types of dietary carotenoids such as a carotene b carotene b cryptoxanthin lutein zeaxanthin and lycopene Mangoes papayas carrots sweet potatoes spinach and pumpkins are some good sources of a carotene Carotenoids play diverse roles in promoting human health They act as antioxidants in the human body and have strong cancer fighting properties The body converts some carotenoids into vitamin A which is essential for vision normal growth and development The anti inflammatory and immune system benefits of carotenoids can help in preventing cardiovascular diseases The book outlines the importance of carotenoids in human health in detail With its detailed analyses and data it will prove immensely beneficial to nutritionists registered dieticians and medical students involved in the field of clinical nutrition and dietetics at various levels *Carotenoids: Structure and Function in the Human Body* Muhammad Zia-Ul-Haq, Saikat

Dewanjee, Muhammad Riaz, 2021-02-17 Plants produce chemicals as part of their normal metabolic activities These include primary metabolites found in all plants such as sugars and fats as well as secondary metabolites which can have therapeutic effects in humans and be refined to produce drugs Plants synthesize a bewildering variety of phytochemicals but most are derivatives of a few biochemical motifs Numerous herbal derived substances have been evaluated for their therapeutic

potential These include alkaloids coumarins saponins plant pigments and flavonoids Flavonoids carotenoids and anthocyanins are probably the best known of these substances due to their antioxidant properties Carotenoids Structure and Function in the Human Body presents comprehensive coverage of carotenoids The text covers the scientific literature and clinical significance of this organic pigment with an emphasis on its therapeutic potential The authors approach carotenoids from a range of perspectives from their structural and physicochemical properties to their distribution in nature interaction with the human metabolism and use as a coloring agent in various products The intake metabolism and secretion of anthocyanins in the human body are covered in depth as are the biosynthetic pathways through which these compounds are synthesized in the natural system Factors affecting stability and extraction are listed and health related uses and biological activities are covered in great detail Present and future trends in carotenoid research are also presented This book provides a solid background in carotenoids for researchers and professionals in food science food technology nutrition biology chemistry and medical sciences
