

The 30GB chillers provide multiple unit capacity with single-package economy

Carrier's 30GB units deliver 150, 175 or 200 tons of liquid chilling capacity in a single enclosure. Compact size allows faster rigging, installation and setup on the ground or on the roof. Units arrive assembled and fully charged with R-22. A simple hookup to power supply and chilled water lines completes the installation.

The 30GB line saves operating costs with precise multiple step capacity control. Either 6, 7 or 8 steps of control, depending on the unit, allows load handling to 12-1/2% of total capacity. Condenser coils are circuited for maximum subcooling, increasing unit capacity 1% for each 2 degrees of subcooling with no increase in power input or need for larger, costlier compressors. Multiple condenser fans cycle

automatically to maintain positive head pressure for low ambient operation down to 0°F without additional controls to purchase!

The 30GB chillers perform reliably on the job, too. Compressors are mounted on spring-isolated rails to minimize vibration, eliminating the need for external isolation. All controls and factory wiring are protected within weather-resistant, galvanized steel enclosures. Fan guards are PVC-coated steel wire for weather resistance.

Put Carrier's high capacity liquid chillers to work on your large commercial job. The cost-saving advantages of fast installation, controlled capacity operation, and low maintenance really add up to superior performance.

Carrier's serviceable semi-hermetic compressor is protected by unique five-way system

1. **Ground current sensing refrigerant circuit protection.** An electronic sensing device automatically shuts down a compressor if an electrical phase imbalance greater than 2.5 amps occurs due to compressor motor malfunction, thus preventing refrigerant system contamination.

2. **Overtemperature protection.** Discharge gas thermostat, located in the cylinder head of each compressor, triggers a refrigerant circuit shutdown if temperature becomes abnormally high, preventing compressor failure.

3. **Electrical overload protection.** Calibrated, ambient-compensated, magnetic-trip circuit breakers with manual reset provide single-phase and phase reversal protection.

4. **Oil-pressure safety switch.** A switch in each refrigerant circuit protects compressors from damage due to lack of proper lubrication.

5. **High-pressure switch.** A switch mounted on each compressor shuts off the compressor if discharge pressure becomes excessive.

Additional compressor features:

- 1. Vane-type positive displacement oil pump.
- 2. Motor-compressor crankshaft.
- 3. Discharge shutoff valve.
- 4. Terminal box.
- 5. Oil reservoir showing oil screen and oil intake line.
- 6. Discharge valve assembly.
- 7. Crankcase oil heater.
- 8. Isolation springs.
- 9. High-pressure switch.
- 10. Discharge gas thermostat.
