

The Organizational Design-Performance Matrix

HIGH DESIGN, HIGH PERFORMANCE

Organizations in this quadrant have an effective design and achieve high performance. Example: A tech company with a flat hierarchy and high innovation output.

HIGH DESIGN, LOW PERFORMANCE

Organizations here have a good design but struggle with performance. Example: A well-structured retail chain facing declining sales due to market saturation.

LOW DESIGN, HIGH PERFORMANCE

These organizations perform well despite a poor design. Example: A startup with chaotic processes but high revenue growth.

LOW DESIGN, LOW PERFORMANCE

Organizations in this quadrant have both poor design and performance. Example: A manufacturing firm with outdated processes and declining market share.

Modeling, Analysis and Optimization of Process and Energy Systems F. Carl Knopf,2011-12-14 Energy costs impact the profitability of virtually all industrial processes Stressing how plants use power and how that power is actually generated this book provides a clear and simple

way to understand the energy usage in various processes as well as methods for optimizing these processes using practical hands on simulations and a unique approach that details solved problems utilizing actual plant data Invaluable information offers a complete energy saving approach essential for both the chemical and mechanical engineering curricula as well as for practicing engineers

Microelectrofluidic Systems Tianhao Zhang,Krishnendu Chakrabarty,Richard B. Fair,2018-10-08 Composite systems that integrate microelectromechanical and microelectrofluidic MEF components with electronics are emerging as the next generation of system on a chip SOC designs However there remains a pressing need for a structured methodology for MEFS design automation including modeling techniques and simulation and optimization tools Integrating top down and bottom up design philosophies Microelectrofluidic Systems presents the first comprehensive design strategy

for MEFS This strategy supports hierarchical modeling and simulation from the component level to the system level It leads to multi objective optimization tools valuable in all phases of the design process from conceptualization to final manufacturing The authors begin by defining the basic variables and elements needed to describe MEFS behavior then model that behavior across three layers of abstraction the low level component high level reconfigurable architecture and bio chemical application layers They have developed a hierarchical integrated design environment with SystemC and present its architecture and associated functional packages Microelectrofluidic Systems is visionary in its leverage of electronic design principles for microsystem design and heralds a new era of automated SOC design The strategy it presents holds the potential for significant reductions in design time and life cycle maintenance costs and its techniques and tools for robust design and application flexibility can lead to the high volume production needed for the inevitably growing product market

Proceedings of 5th International Conference on Civil Engineering and Architecture Thomas Kang,2023-10-04
This book states that the proceedings gathers selected papers from 2022 5th International Conference on Civil Engineering and Architecture ICCEA 2022 which was held in Hanoi Vietnam on December 16 18 2022 The conference is the premier forum for the presentation of new advances and research results in the fields of theoretical experimental and practical civil engineering and architecture And this proceedings from the conference mainly discusses architectural design and project management environmental protection and spatial planning design and analysis of building materials and structural engineering and safety And these materials can be useful and valuable sources for researchers and professionals working in the field of civil engineering and architecture
