Extinction P. B. Wignall, 2019 Extinction has occurred throughout the history of life and nearly all the species that have ever existed have now disappeared In this Very Short Introduction Paul B Wignall looks at the causes and nature of extinction events what makes a species vulnerable and the debates in modern science of the role of climate and humans

The Future Jennifer M. Gidley, 2017-03-13 From the beginning of time humans have been driven by both a fear of the unknown and a curiosity to know We have always yearned to know what lies ahead whether threat or safety scarcity or abundance Throughout human history our forebears tried to create certainty in the unknown by seeking to influence outcomes with sacrifices to gods preparing for the unexpected with advice from oracles and by reading the stars through astrology As scientific methods improve and computer technology develops we become ever more confident of our capacity to predict and quantify the future by accumulating and interpreting patterns from the past yet the truth is there is still no certainty to be had In this Very Short Introduction Jennifer Gidley considers some of our most burning questions What is the future Is the future a time yet to come Or is it a utopian place Does the future have a history Is there only one future or are there many possible futures She asks if the future can ever be truly predicted or if we create our own futures both hoped for and feared by our thoughts feelings and actions and concludes by analysing how we can learn to study the future

Environmental Politics: A Very Short

Introduction Andrew Dobson, 2016-01-28 Environmental politics has many faces and operates at multiple scales it preoccupies individuals as well as governments drives local agreements as well as international treaties results in minor business changes as well as wholesale business decisions and fluctuates between a politics of protest and one of accommodation In this Very Short Introduction Andrew Dobson offers a lively and comprehensive commentary on the many facets of environmental politics today Looking towards the future he asks whether environmental politics will be comfortably accommodated by mainstream politics or whether the advent of the Anthropocene a whole new geological epoch driven by human impact on the environment will herald a break with the politics of growth that has dominated social life since the beginning of the Industrial Revolution ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable

Human Extinction Émile P. Torres, 2023-06-15 This volume traces the origins and evolution of the idea of human extinction from the ancient Presocratics through contemporary work on existential risks Many leading intellectuals agree that the risk of human extinction this century may be higher than at any point in our 300 000 year history as a species This book provides insight on the key questions that inform this discussion including when humans began to worry about their own extinction and how the debate has changed over time It establishes a new theoretical foundation for thinking about the ethics of our extinction arguing that extinction would be very bad under most circumstances although the outcome might be on balance good Throughout the book graphs tables and images further illustrate how human choices and attitudes about extinction have evolved in Western history In its thorough examination of humanity s past this book also provides a starting point for understanding our future Although accessible enough to be read by undergraduates Human Extinction contains new and thought provoking research that will benefit even established academic philosophers and historians

Science, Politics, and the Anthropocene Working Group Alexander Damianos, 2025-11-03 Between 2009 and 2024 the Anthropocene Working Group AWG an interdisciplinary team of geologists archaeologists Earth systems scientists historians of science and one lawyer sought to formalise the Anthropocene as a formal unit of the Geologic Time Scale Science Politics and the Anthropocene Working Group What Was the Anthropocene presents the first comprehensive ethnographic and history of science study of the AWG s formalisation effort Drawing on original archival research this book provides a history of the formalisation procedure as well as the practices of measurement and correlation particularly to the amendment of the Geologic Time Scale Through participant observation this book explains

how the AWG applied geological methods and practices to situate contemporary society within the context of 4.5 billion years of Earth's history. Positioning contemporary debates concerning the Anthropocene within a historical appraisal of geoscience, Science Politics and the Anthropocene Working Group: What Was the Anthropocene? offers a unique multidisciplinary perspective on how scientific knowledge is shaped and legitimised under conditions of the climate crisis. Science Politics and the Anthropocene Working Group: What Was the Anthropocene? provides an invaluable resource for scholars of all levels studying geosciences, the history of science, social studies of science and the Anthropocene.

Our Shadowed World Dominic Kirkham, 2019-08-08. Civilization is often equated with the story of human advancement and progress. Yet it is also the story of human oppression, exploitation, war and empire. In our own time, modern global civilization has brought us to the brink of planetary destruction. By offering an understanding of our past, this book aims to provide a stimulus to considering a different future. *Our Shadowed World* considers how we have been brought to this point. It describes how the fragmented and conflicted state of humanity has progressed from the earliest city states to the devastation of world war and holocaust, how civilization has brought its own form of savagery. What beliefs have underlain and motivated human action? How have humans tried to understand their world? Driven by the relentless quest for power by greed and by extreme beliefs, the human enterprise today has placed the very idea of civilization under threat, the subject of radical questioning. Despite a new ecological awareness dedicated to saving the planet from civilization's carelessness and a preoccupation with the nature of apocalyptic thinking, a question mark looms over the very survival of humanity in its present state, a question mark that now overshadows the world.

Renewable Energy Nick Jelley, 2020-02-27. Energy is vital for a good standard of living and much of the world's population does not have enough. Affordable and adequate sources of power that do not cause climate change or pollution are crucial, and renewables provide the answer. Wind and solar farms can now provide the cheapest electricity in many parts of the world. Moreover, they could provide all of the world's energy needs. But while market forces are fast helping the transition from fossil fuels to renewables, there are opposing pressures such as the USA's proposed withdrawal from the Paris Agreement and the vested interests in fossil fuels. This Very Short Introduction describes the main renewable sources of energy: solar, wind, hydropower and biomass, as well as the less well-developed ones: geothermal, tidal and wave. Nick Jelley explains the challenges of integrating renewables into electricity grids and the need for energy storage and for clean heat, and discusses the opportunities in developing countries for renewable energy to empower millions. He also considers international efforts and policies to support renewables and tackle climate change and explains recent innovations in wind and solar energy production, battery storage and in the emerging power-to-gas provision for clean heating. Throughout, he emphasises what renewable energy can deliver and its importance in tackling climate change and in improving health, welfare and access to electricity.

Anthropology in the Anthropocene Christoph Antweiler, 2024-11-25

In this book anthropologist and geologist Christoph Antweiler shows that geology is a special namely historical natural science and is therefore relevant for a historically informed anthropology He argues that we do not only need a geologically informed cultural anthropology but conversely also an anthropologically oriented geology A comprehensive geology must include material human culture as a fundamental geological phenomenon In relation to cultural anthropology the author discusses the challenge the Anthropocene poses for cultural anthropology as a traditionally micro oriented social science The book discusses where the blind spots lie in the highly interdisciplinary discussion Common narratives are critically scrutinized The author argues for the need for a new discipline geoanthropology

Disaster Makers Terry Gibson, 2025-02-20

Drawing on decades of on the ground experience a strong body of existing research on the social construction of risk and his own academic research Terry Gibson demonstrates the transformative potential of current debates around de and re growth for disaster studies Some disasters are highly visible to us all such as the Covid 19 pandemic or the climate emergency Many more are hidden everyday disasters grinding down the lives of the poor and vulnerable Very few of these disasters just happen Most are caused by those who create risk faster than they can mop it up by those who pursue reckless unmanaged economic growth that demands ever increasing manufacture consumption building food production and energy consumption These are the disaster makers In this book Gibson provides a thorough sophisticated yet accessible account of who the disaster makers are what they do and how we can do things better Ultimately Gibson demonstrates the urgency of replacing growth based economics with a fundamentally different social and economic model This is more than a dream As Gibson shows it becomes a practical possibility the moment enough of us commit to building a movement

Deserts Nick

Middleton, 2009-11-26 Deserts make up a third of the planet s land surface but if you picture a desert what comes to mind A

wasteland A drought A place devoid of all life forms Deserts are remarkable places Typified by drought and extremes of temperature they can be harsh and hostile but many deserts are also spectacularly beautiful and on occasion teem with life Nick Middleton explores how each desert is unique through fantastic life forms extraordinary scenery and ingenious human adaptations He demonstrates a desert s immense natural beauty its rich biodiversity and uncovers a long history of successful human occupation This Very Short Introduction tells you everything you ever wanted to know about these extraordinary places and captures their importance in the working of our planet ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable Transformation Processes in Europe and Beyond Florian Weber,Olaf Kühne,Julia Dittel,2024-07-05 Europe and the world in all their diversity and complexity have always been and continue to be in a state of change Recent geo political environmental social and economic developments demonstrate a world in constant flux These ever changing framework conditions require corresponding transformations in many different structures This anthology takes these observations as a starting point to illuminate theoretical perspectives methodological approaches and empirical insights related to recent transformation processes in Europe and beyond with a special focus in this respect on the USA In view of their comprehensive nature transformation processes cannot be analysed from a single perspective a uniform approach or theory would fail to address their complexity and contingency In this sense horizontal geographies serves as our theoretical framework The concept refers to comprehensive synthesizing regional analyses which collect structure and reflect on knowledge with diverse spatial social and cultural contexts The interdisciplinary and international authorship does justice to the idea of horizontal multi perspective geographies and considers a wide range of transformation processes in Europe and beyond
