**Climate Capitalism** Peter Newell,Matthew Paterson,2010-05-27 Explores how we should react to the political dilemmas of adapting the global economy to confront climate change    [Climate Capitalism](#) L. Stensrud,Thomas Hylland Eriksen,2019    **The Case for Climate Capitalism** Tom Rand,2020-03-03 A call for the Left and

Right the business community and environmentalists bankers and activists to join together reclaim capitalism and force profits to align with the planet A warming climate and a general distrust of Wall Street has opened a new cultural divide among those who otherwise agree we must mitigate climate risk anti market critics such as Naomi Klein target capitalism itself as a root cause of climate change while climate savvy business leaders believe we can largely continue with business as usual by tinkering around the edges of our economic system Rand argues that both sides in this emerging cultural war are ill equipped to provide solutions to the climate crisis and each is remarkably naive in their view of capitalism On one hand we cannot possibly transition off fossil fuels without the financial might and entrepreneurial talent market forces alone can unlock On the other without radical changes to the way markets operate capitalism will take us right off the climate cliff Rejecting the old Left Right ideologies Rand develops a more pragmatic view capable of delivering practical solutions to this critical problem A renewed capitalism harnessed to the task is the only way we might replace fossil fuels fast enough to mitigate severe climate risk If we leave our dogma at the door Rand argues we might just build an economy that survives the century *The Great Adaptation* Romain Felli,2021-07-20 When capitalism doesn't fight climate change but rather tries to make a buck out of it The Great Adaptation tells the story of how scientists governments and corporations have tried to deal with the challenge that climate change poses to capitalism by promoting adaptation to the consequences of climate change rather than combating its causes From the 1970s neoliberal economists and ideologues have used climate change as an argument for creating more flexibility in society that is for promoting more market based solutions to environmental and social questions The book unveils the political economy of this potent movement whereby some powerful actors are thriving in the face of dangerous climate change and may even make a profit out of it

### **Climate Capitalism**

Akshat Rathi,2023-10-12 An important read for anyone in need of optimism Bill Gates Dazzling and deeply reported David Wallace Wells author of *The Uninhabitable Earth* It's now cheaper to save the world than destroy it Our age will be defined by the climate emergency But contrary to the doomist narrative that's taken hold the world has already begun deploying the solutions needed to deal with it On a journey across five continents Climate Capitalism tracks the unlikely heroes driving the fight against climate change From the Chinese bureaucrat who did more to make electric cars a reality than Elon Musk to the Danish students who helped to build the world's longest operating wind turbine or the American oil executive building the technology that can reverse climate damages we meet the people working to scale technologies that are finally able to bend the emissions curve Through stories that bring people policy and technology together Akshat Rathi reveals how the green economy is not only possible but profitable This inspiring blend of business science and history provides the framework for ensuring that future generations can live in prosperity and that the wheels of progress don't falter *This Changes Everything* Naomi Klein,2015-08-04 Explains why the environmental crisis should lead to an abandonment of free market ideologies and current political systems arguing that a massive reduction of greenhouse emissions may offer a best chance

for correcting problems *Climate Change and the Crisis of Capitalism* Mark Pelling, David Manuel-Navarrete, M. R. Redclift, 2012 Are established economic social and political practices capable of dealing with the combined contemporary crisis of climate change and economic disruption Will falling back on those wisdoms that have prefigured crises help identify ways forward or simply reconfigure risk so that it might reappear in another guise in the future This volume argues that the combination of global environmental change and global economic restructuring require a re thinking of the priorities processes and underlying values that shape contemporary development aspirations and policy If you re interested in getting to the bottom of why we are killing this beautiful planet of ours and finding out the ways in which we can fight this unfortunate tendency of our species then please have a go you might like it Manchester Climate Monthly [Constructing Climate Capitalism](#) Jean Philippe Sapinski, University of Victoria (B.C.). Department of Sociology, 2014 Climate capitalism has emerged over the last two decades as the response of a section of the global elite to the crisis of global warming Greater consciousness of threats to the stability of the global carbon cycle and thus to the general conditions for capital accumulation has led certain members of the global elite to design a project of climate capitalism that holds the promise of a smooth transition out of the crisis and into a new era of accumulation on renewed ecologically modernized foundations However climate capitalism has been contested from the start For one many still do not accept that there exists any problem that needs addressing in the first place At the other end of the spectrum climate capitalism is challenged on the grounds of its incapacity to reduce GHG emissions and its complicity with neoliberalism in entrenching existing inequality Debates abound around the latter critique Should climate capitalism be opposed by all means or should it be cautiously supported for want of an alternative that can be realized rapidly enough The response to this question crucially depends on whether support exists among the corporate and other global elites for a climate capitalism that stands a chance of actually reducing climate impacts in a timely manner This dissertation directly addresses the issue of the existence and extent of corporate elite support for climate capitalism It asks specifically what forces support climate capitalism how and to what degree they are organized and how powerful they are relative to the forces of the status quo **The Wrath of Capital** Adrian Parr, 2014-09-02 Although climate change has become the dominant concern of the twenty first century global powers refuse to implement the changes necessary to reverse these trends Instead they have neoliberalized nature and climate change politics and discourse and there are indications of a more virulent strain of capital accumulation on the horizon Adrian Parr calls attention to the problematic socioeconomic conditions of neoliberal capitalism underpinning the world s environmental challenges and she argues that until we grasp the implications of neoliberalism s interference in climate change talks and policy humanity is on track to an irreversible crisis Parr not only exposes the global failure to produce equitable political options for environmental regulation but she also breaks down the dominant political paradigms hindering the discovery of viable alternatives She highlights the neoliberalization of nature in the development of green technologies land use dietary

habits reproductive practices consumption patterns design strategies and media She dismisses the notion that the free market can solve debilitating environmental degradation and climate change as nothing more than a political ghost emptied of its collective aspirations Decrying what she perceives as a failure of the human imagination and an impoverishment of political institutions Parr ruminates on the nature of change and existence in the absence of a future The sustainability movement she contends must engage more aggressively with the logic and cultural manifestations of consumer economics to take hold of a more transformative politics If the economically powerful continue to monopolize the meaning of environmental change she warns new and more promising collective solutions will fail to take root

### **Global Capitalism**

**and Climate Change** Hans A. Baer,2012 Many progressive scholars particularly in the social sciences have increasingly come to acknowledge that anthropogenic climate change constitutes yet another contradiction of global capitalism This book constitutes an effort to develop a critical social science of climate change one that posits its roots in global capitalism with its emphasis on profit making a treadmill of production and consumption heavy reliance on fossil fuels and commitment to ongoing economic expansion It explores the systemic changes necessary to create a more socially just and sustainable world system that would possibly start to move humanity toward a safer climate and discusses the role of a burgeoning climate movement in this effort

*The Anthropology of Climate Change* Hans Baer,Merrill Singer,2014-04-24 In addressing the urgent questions raised by climate change this book provides a comprehensive overview of the anthropology of climate change guided by a critical political ecological framework It argues that anthropologists must significantly expand their focus on climate change and their contributions to responding to climate change as a grave risk to humanity The book presents a human socioecological framework for conceptualizing climate change It examines the emergence and slow maturation of the anthropology of climate change reviews the historic foundations for this work in the archaeology of climate change and presents three alternative contemporary theoretical perspectives in the anthropology of climate change The book synthesizes anthropological work and perspectives on climate change in the form of case studies in various regions of the world revealing the nature of global climate change as constituting multiple and somewhat diverse changes in local settings It explores the applied anthropology of climate change in terms of the ways anthropologists are contributing to climate policy working with communities on climate change issues as well as within the climate movement both internationally and nationally Finally it provides an overview of what other the social sciences are saying about climate change and explores ways that the anthropology of climate change can interface with sociology political science and human geography in order to create an integrated social science of climate change This book gives researchers and students in Environmental Anthropology Climate Change Human Geography and Sociology a novel framework for understanding climate change that emphasizes human socioecological interactions

**Irrationality of Capitalism and Climate Change** Andrew Kolin,2022-02-07 The overwhelming scientific evidence indicates that planet Earth is in the process of undergoing dramatic climate change which threatens to

undermine the quality of life around the world Irrationality of Capitalism and Climate Change demonstrates how the roots of humanity's assault on the environment are directly associated with the origins of capitalism an irrational social system in which reproduction of capital on a global scale is destructive to the environment The author begins with a philosophical analysis of the role that reason and passion assume in social systems then traces the local and regional environmental effects of preindustrial social systems The author argues that nations are faced with a global challenge to construct life affirming policy that functions as an alternative to the global devastation that the accumulation of capital causes The book concludes by proposing rational socialism a life affirming social system that functions in harmony with the environment

### **Building**

**the Critical Anthropology of Climate Change** Hans A. Baer,Merrill Singer,2024-08-14 This book applies a critical perspective to anthropogenic climate change and the global socio ecological crisis The book focuses on the critical anthropology of climate change by opening up a dialogue with the two main contending perspectives in the field namely the cultural ecological and the cultural interpretive perspectives Guided by these the authors take a firm stance on the types of changes that are needed to sustain life on Earth as we know it Within this framework they explore issues of climate and social equity the nature of the current era in Earth's geohistory the perspectives of the elite polluters driving climate change and the regrettable contributions of anthropologists and other scholars to climate change Engaging with perspectives from sociology political science and the geography of climate change the book explores various approaches to thinking about and responding to the existential threat of an ever warming climate In doing so it lays the foundation for a brave new sustainable world that is socially just highly democratic and climatically safe for humans and other species This book will be of interest to researchers and students studying environmental anthropology climate change human geography sociology and political science

**Climate Change, Capitalism, and Corporations** Christopher Wright,Daniel Nyberg,2015-09-23 Climate change is one of the greatest threats facing humanity a definitive manifestation of the well worn links between progress and devastation This book explores the complex relationship that the corporate world has with climate change and examines the central role of corporations in shaping political and social responses to the climate crisis The principal message of the book is that despite the need for dramatic economic and political change corporate capitalism continues to rely on the maintenance of business as usual The authors explore the different processes through which corporations engage with climate change Key discussion points include climate change as business risk corporate climate politics the role of justification and compromise and managerial identity and emotional reactions to climate change Written for researchers and graduate students this book moves beyond descriptive and normative approaches to provide a sociologically and critically informed theory of corporate responses to climate change

### **Refusing Ecocide**

William K. Carroll,2024-11-19 Refusing Ecocide From Fossil Capitalism to a Liveable World provides a critical analysis of the central role of fossil capitalism in causing climate change and argues that only alternatives based upon democratic eco socialism can prevent the deepening of the climate crisis Employing three core

concepts within historical materialism capitalist accumulation imperialism and hegemony it locates the existential threat of our changing climate in the drive for increasing profit and growth the domination of advanced capitalist states that strip resources and exploit cheap labour and the consent to the capitalist way of life in the global North With attention to the ways in which powered by fossil fuels capital has subjected the world to its predatory logic this book charts this history and surveys the damage from the Industrial Revolution to today s deep civilizational crisis arguing that the market based and purely technological solutions of climate capitalism are too little too late A call for a multifaceted and multi scalar shift away from capitalist accumulation imperialism and class hegemony and instead towards democratic eco socialism it will appeal to scholars across the social sciences with interests in political and social theory the environment and sustainability

**Climate Innovation** N. Harrison,J. Mikler,2014-03-19 A comprehensive examination of the inability of liberal capitalism to generate the technological innovations necessary to prevent dangerous climate change The case is made for the need for institutional evolution to drive the climate innovation and the potential for climate innovation in an increasingly economically interconnected world

[Negotiating Climate Change in Crisis](#) Steffen Böhm,Sian Sullivan,2021-09-28 Climate change negotiations have failed the world Despite more than thirty years of high level global talks on climate change we are still seeing carbon emissions rise dramatically This edited volume comprising leading and emerging scholars and climate activists from around the world takes a critical look at what has gone wrong and what is to be done to create more decisive action Composed of twenty eight essays a combination of new and republished texts the anthology is organised around seven main themes paradigms what counts extraction dispatches from a climate change frontline country governance finance and action s Through this multifaceted approach the contributors ask pressing questions about how we conceptualise and respond to the climate crisis providing both big picture perspectives and more focussed case studies This unique and extensive collection will be of great value to environmental and social scientists alike as well as to the general reader interested in understanding current views on the climate crisis

**Climate Chaos and its Origins in Slavery and Capitalism** Reva Blau,Judith Blau,2020-10-26 Climate Chaos provides readers the latest consensus among international scientists on the cascading impacts of climate change and the tipping points that today threaten to irreversibly destroy the delicate balance of the Earth s ecosystems The book argues that deregulation and an expansion of fossil fuel extraction have already tipped the planet towards a climate that is out of control This crisis will cause massive human suffering when extreme weather pollution and disease lead to displacement food and water shortages war and possibly species extinction The repression of science creates an existential crisis for humanity that has reached crisis proportions in the twentieth first century The scale of the crisis has prompted a call for geoengineering large interventions into the climate by technological innovation However the history of colonialism and slavery make the technological and monetary elites untrustworthy to solve this humanitarian and planetary crisis While the elites have always cast certain groups of humanity as expendable the climate crisis makes a true humanist

and egalitarian movement based in human rights and dignity not only aspirational but also existentially mandatory The crisis demands that we remake the world into a more just and safe place for all the world s people
