## UNIT OVERVIEW

Developmental psychologists study the life cycle, from conception to death. Unit 9 covers physical, cognitive, and social development over the life span and introduces two major issues in developmental psychology: (1) whether development is best described as gradual and continuous or as a discontinuous sequence of stages and (2) whether the individual's personality remains stable or changes over the life span. The issue of the relative impact of genes and experience on behavior is the subject of Unit 3C. This unit also explores how genes and environment interact to shape both the biological and social aspects of our gender.

There is a great deal of information to learn in this unit, including many terms and a number of important research findings. Pay particular attention to the stage theories of Jean Piaget, Lawrence Kohlberg, and Erik Erikson, as well as to the discussion regarding intellectual stability during adulthood.

NOTE: Answer guidelines for all Unit 9 questions begin on page 253.

## UNIT REVIEW

First, skim this section, noting headings and boldface items. After you have read the section, review each objective by completing the sentences and answering the questions that follow it. As you proceed, evaluate your performance by consulting the answers beginning on page 253. Do not continue with the next section until you understand each answer. If you need to, review or reread the section in the textbook before continuing.

### Introduction (p. 411)

Objective 1: State three areas of change that developmental psychologists study, and identify the three major issues in developmental psychology.

1. Scientists who study physical, cognitive, and social changes throughout the life cycle are called \_\_\_\_\_.
2. One of the major issues in developmental psychology concerns the relative importance of genetic inheritance and experience in determining behavior; this is called the \_\_\_\_\_ and \_\_\_\_\_ issue.
3. A second developmental issue concerns whether developmental changes are gradual or abrupt; this is called the \_\_\_\_\_ and \_\_\_\_\_ issue.
4. A third controversial issue concerns the consistency of personality and whether development is characterized more by \_\_\_\_\_ over time or by change.

### Prenatal Development and the Newborn (pp. 411–415)

Objective 2: Discuss the course of prenatal development and the destructive impact of teratogens, and describe some abilities of the newborn.

1. Conception begins when a woman's \_\_\_\_\_ releases a mature \_\_\_\_\_.
2. The few \_\_\_\_\_ from the man that reach the egg release digestive \_\_\_\_\_ that eat away the egg's protective covering. As soon as one sperm penetrates the egg, the egg's surface \_\_\_\_\_ all other sperm.
3. The egg and sperm \_\_\_\_\_ fuse and become one.
