## **Detecting And Modelling Regional Climate Change:**

**Detecting and Modelling Regional Climate Change** Manola Brunet, India, Diego Lopez Bonillo, 2001-10-09 For the very first time this book provides updated integrated and organized theoretical and methodological information on regional climate change and the associated environmental and socio economic impacts on a regional scale. The most recent findings in the field of long term climate change which improve our understanding of the global climate puzzle will be presented. Readers are introduced to state of the art research in downscaling and GCMs which involve the construction of reliable regional climate scenarios and the solution to key problems regarding the assessment of the impacts of climate change in the most important geographical areas of the world from the Arctic to Antarctic regions with special emphasis on the Northern Hemisphere

**Detecting and Modelling Regional Climate Change** Manola Brunet, Diego Lopez Bonillo, 2014-03-12 For the very first time this book provides updated integrated and organized theoretical and methodological information on regional climate change and the associated environmental and socio economic impacts on a regional scale. The most recent findings in the field of long term climate change which improve our understanding of the global climate puzzle will be presented. **Second Assessment of Climate Change for the Baltic Sea Basin** The BACC II Author Team, 2015-04-03 This book is an update of the first BACC assessment published in 2008. It offers new and updated scientific findings in regional climate research for the Baltic Sea basin. These include climate changes since the last glaciation approx 12 000 years ago, changes in the recent past the last 200 years, climate projections up until 2100 using state of the art regional climate models and an assessment of climate change impacts on terrestrial, freshwater and marine ecosystems. There are dedicated new chapters on sea level rise, coastal erosion and impacts on urban areas. A new set of chapters deals with possible causes of regional climate change along with the global effects of increased greenhouse gas concentrations, namely atmospheric aerosols and land cover change. The evidence collected and presented in this book shows that the regional climate has already started to change and this is expected to continue. Projections of potential future climates show that the region will probably become considerably warmer and wetter in some parts but dryer in others. Terrestrial and aquatic ecosystems have already shown adjustments to increased temperatures and are expected to undergo further changes in the near future. The BACC II Author Team consists of 141 scientists from 12 countries covering various disciplines related to climate research and related impacts. BACC II is a project of the Baltic Earth research network and contributes to the World Climate Research Programme

**Advances in Large Scale Flood Monitoring and Detection** Salvatore Manfreda, Caterina Samela, Alberto Refice, Valerio Tramutoli, Fernando Nardi, 2020-11-13 Climate change and land use transformations have

induced an increased flood risk worldwide These phenomena are dramatically impacting ordinary life and the economy Research and technology offer a new strategy to quantify and predict such phenomena and also mitigate the impact of flooding In particular the growing computational power is offering new strategies for a more detailed description of the flooding over large scales This book offers an overview of the most recent outcomes of the research on this argument

Managing the Risks of Extreme Events and Disasters to Advance Climate Change Adaptation Christopher B. Field, Vicente Barros, Thomas F. Stocker, Qin Dahe, 2012-05-28 This Intergovernmental Panel on Climate Change Special Report IPCC SREX explores the challenge of understanding and managing the risks of climate extremes to advance climate change adaptation Extreme weather and climate events interacting with exposed and vulnerable human and natural systems can lead to disasters Changes in the frequency and severity of the physical events affect disaster risk but so do the spatially diverse and temporally dynamic patterns of exposure and vulnerability Some types of extreme weather and climate events have increased in frequency or magnitude but populations and assets at risk have also increased with consequences for disaster risk Opportunities for managing risks of weather and climate related disasters exist or can be developed at any scale local to international Prepared following strict IPCC procedures SREX is an invaluable assessment for anyone interested in climate extremes environmental disasters and adaptation to climate change including policymakers the private sector and academic researchers
