**Differential Neural Networks For Robust Nonlinear Control: Identification, State Estimation And Trajectory Tracking** Alex Poznyak, Edgar N Sanchez, Wen Yu, 2001-09-28 This book deals with continuous time dynamic neural networks theory applied to the solution of basic problems in robust control theory including identification state space estimation based on neuro observers and trajectory tracking. The plants to be identified and controlled are assumed to be a priori unknown but belonging to a given class containing internal unmodelled dynamics and external perturbations as well. The error stability analysis and the corresponding error bounds for different problems are presented. The effectiveness of the suggested approach is illustrated by its application to various controlled physical systems robotic chaotic chemical etc

***Recent Advances in Intelligent Control Systems*** Wen Yu, 2009-05-27

Recent Advances in Intelligent Control Systems gathers contributions from workers around the world and presents them in four categories according to the style of control employed fuzzy control neural control fuzzy neural control and intelligent control. The contributions illustrate the interdisciplinary antecedents of intelligent control and contrast its results with those of more traditional control methods. A variety of design examples drawn primarily from robotics and mechatronics but also representing process and production engineering large civil structures network flows and others provide instances of the application of computational intelligence for control. Presenting state of the art research this collection will be of benefit to researchers in automatic control automation computer science especially artificial intelligence and mechatronics while graduate students and practicing control engineers working with intelligent systems will find it a good source of study material.
