Digital Image Processing Using MATLAB Rafael C. Gonzalez, Richard Eugene Woods, Steven L. Eddins, 2004      **Digital Signal and Image Processing Using MATLAB** Maurice Charbit, 2010-01-05 This title provides the most important theoretical aspects of Image and Signal Processing ISP for both deterministic and random signals The theory is supported by exercises and computer simulations relating to real applications More than 200 programs and functions are provided in the MATLAB language with useful comments and guidance to enable numerical experiments to be carried out thus allowing readers to develop a deeper understanding of both the theoretical and practical aspects of this subject      **A Course on Digital Image Processing with MATLAB** P. K. Thiruvikraman, 2019 Concentrating on the principles and techniques of image processing this book provides an in depth presentation of key topics including many techniques not included in introductory texts Practical implementation of the various image processing algorithms is an important step in learning the subject and computer packages such as MATLAB facilitate this without the need to learn more complex programming languages Whilst two chapters are devoted to the MATLAB programming environment and the image processing toolbox the use of image processing algorithms using MATLAB is emphasised throughout the book and every chapter is accompanied by a collection of exercises and programming assignments Including coverage of colour and video image processing as well as object recognition the book is augmented with supplementary MATLAB code and hints and solutions to problems are also provided      **Fundamentals of Digital Image Processing** Chris Solomon, Toby Breckon, 2011-07-05 This is an introductory to intermediate level text on the science of image processing which employs the Matlab programming language to illustrate some of the elementary key concepts in modern image processing and pattern recognition The approach taken is essentially practical and the book offers a framework within which the concepts can be understood by a series of well chosen examples exercises and computer experiments drawing on specific examples from within science medicine and engineering Clearly divided into eleven distinct chapters the book begins with a fast start introduction to image processing to enhance the accessibility of later topics Subsequent chapters offer increasingly advanced discussion of topics involving more challenging concepts with the final chapter looking at the application of automated image classification with Matlab examples Matlab is frequently used in the book as a tool for demonstrations conducting experiments and for solving problems as it is both ideally suited to this role and is widely available Prior experience of Matlab is not required and those without access to Matlab can still benefit from the independent presentation of topics and numerous examples Features a companion website [www.wiley.com/go/solomon\\_fundamentals](http://www.wiley.com/go/solomon_fundamentals) containing a Matlab fast start primer further exercises examples instructor resources and accessibility to all files corresponding to the examples and exercises within the book itself Includes numerous examples graded exercises and computer experiments to support both students and instructors alike      *A Course on Digital Image Processing with MATLAB(R)* P.
