Healthy and energy efficient buildings Sunil K. Sansaniwal,Roberto Alonso

González-Lezcano,2023-12-21 This Research Topic on Healthy and Energy Efficient Buildings focuses on the emerging need for sustainable and healthy indoor environments. The built environment contributes significantly to energy consumption and environmental degradation leading to adverse effects on human health and well being. Therefore this Research Topic aims to bring together cutting edge research that addresses the complex interplay between building energy efficiency and occupant health. The scope of the Research Topic covers topics such as energy efficiency, indoor environmental quality, sustainable energy, health and well being, building codes and standards, energy management and green building practices. The ultimate goal of the Research Topic is to promote sustainable building practices and enhance the well being of building occupants while reducing the environmental impact of buildings. While energy efficiency has become a top priority in building design, there has been less emphasis on creating indoor environments that are conducive to good health. To achieve the goal of this Research Topic, recent advances in building design, construction and operation must be incorporated. These include the use of advanced materials and technologies such as smart sensors and automation systems that can monitor and control indoor air quality, temperature and lighting levels to create optimal indoor conditions for occupants. Additionally, the integration of renewable energy sources such as solar and wind power can help reduce the carbon footprint of buildings. In order to promote healthy buildings, there is a need for more research on the impact of building design and materials on indoor air quality and occupant health. This includes exploring the use of natural ventilation and passive cooling strategies as well as the use of low emitting materials and finishes that do not off-gas harmful chemicals. This Research Topic seeks to address the need for sustainable buildings that prioritize both energy efficiency and occupant health.
