Cosmic Bullets Roger Clay, Bruce Dawson, 1999-04-23 The first complete book on one of the oldest cosmic mysteries

Cosmic Bullets Roger Clay, Bruce Dawson, 1998-05-10 In 1992 the fastest object known to mankind hit the Earth's atmosphere at a speed within a billion trillionth of one percent of the speed of light carrying an energy far above that of the most powerful particle accelerator ever built That object was a cosmic ray *Cosmic Bullets* tells the incredible story of the discovery and study of these messengers from space Topics in Cosmic-ray Astrophysics Michael DuVernois, 1999 Presents recent findings on charged cosmic rays primarily nuclei from galactic and extra galactic sources Chapters on new and proposed instruments and techniques examine projects such as the SilEye and the PAMELA apparatus for the search of antimatter in cosmic rays Papers on cosmic ray models look at nonlinear phenomena in diffusive shock acceleration and propagation of cosmic rays in the galaxy Material on cosmic ray sources and ultra high energy cosmic rays examine source composition and its relation to the interstellar matter and cosmic ray mass composition at highest energies The editor is a researcher at Pennsylvania State University Annotation copyrighted by Book News Inc Portland OR **Ripples On A**

including theoretical physics as in the early classical mechanics the unnatural reversible time of Newton based on the medieval concept of geometric time by Nicholas Oresme is still used This original sin of natural sciences has unintended consequences and creates a set of paradoxes and methodological problems for science The book explores two new models of essentially irreversible time decelerating cosmological time and irreversible discrete time of a microcosm It discusses recent astronomical observations that reveal evidence of the cosmological deceleration of the pace of time in the distant cosmos in the solar system and on earth The structure of the model of irreversible discrete time of a microcosm as considered in the book allows for the existence of both time and anti time In particular the model predicts new uncertainty relations and violation of the mirror symmetry of the integral internal parity of the entire population of micro particles that correspond to current studies of elementary particle physics The Feynman Processor Gerard J. Astronomy and Astrophysics Monthly Index ,1979 **High Energy Cosmic Rays** Todor Stanev,2010-03-10 Cosmic rays are an essential part of the universe. Their origin is related to many important astrophysical processes such as star formation, stellar evolution, supernova explosions, and the state of interstellar matter in the Galaxy. *Cosmic Ray Physics* reviews our present knowledge of cosmic rays, describing how they are born in a wide range of cosmic processes, how they are accelerated, and how they interact with matter, magnetic fields, and radiation during their journey across the Galaxy. The book also describes the detection of cosmic rays and the processes which take place both at the top and within the Earth's atmosphere. The author also describes the very important area of the underground detection of very high energy cosmic rays and particles such as neutrinos. The book is divided into two parts: the first describing the standard model of cosmic rays and contemporary challenges, and the second part dealing with very high energy cosmic rays that cannot be detected directly in satellite and balloon experiments and with gamma ray and neutrino astronomy. It is in this particular aspect of the book that the greatest developments have taken place during the 5 years since the first edition was completed. Consequently, it is in the chapters on cosmic ray showers, their spectrum on high energy neutrinos, and on gamma ray astronomy of this revised and updated 2nd edition that a considerable amount of new material has been incorporated, with more minor revisions and updating taking place in the first part of the book. Students and lecturers of advanced undergraduate courses on cosmic rays and astroparticle physics, as well as post graduates and researchers, will continue to find this book a valuable source of learning and reference. **Ultra-high Energy Particle Astrophysics** Shigeru Yoshida,2003 Many kinds of radiation exist in the universe, including photons and particles with a wide range of energies. Some of the radiation is produced in stars and galaxies, and some is cosmological background radiation, a relic from the history of cosmic evolution. Among all this radiation, the most energetic are cosmic ray particles, nucleons, nuclei, and even extremely energetic gamma rays. There are some observational facts about cosmic rays to give suggestions on their origin. The most important one among them is that the energy spectrum of high energy cosmic rays above 10 GeV, where the magnetic field of the sun is no longer a concern, is well represented by a power law form. This indicates cosmic ray particles are products of non-thermal processes. Their energy extends over more than 13 decades, from 10⁷ eV up to 10²⁰ eV. In terms of its structure, the spectrum can be divided into three regions: two knees and one ankle. The first knee appears around 3 × 10¹⁵ eV, where the spectral power law index changes from 2.7 to 3.0. The second knee is somewhere between 10¹⁷ eV and 10¹⁸ eV, where the spectral slope changes from 3.0 to around 3.3. The ankle is seen at or after 3 × 10¹⁸ eV. Above that energy, the spectral slope is around 2.7, but with a large

A Thin Cosmic Rain Michael W. Friedlander, 2002-11-30 Enigmatic for many years cosmic rays are now known to be not rays at all but particles the nuclei of atoms raining down continually on the earth where they can be detected throughout the atmosphere and sometimes even thousands of feet underground This book tells the long running detective story behind the discovery and study of cosmic rays a story that stretches from the early days of subatomic particle physics in the 1890s to the frontiers of high energy astrophysics today Writing for the amateur scientist and the educated general reader Michael Friedlander a cosmic ray researcher relates the history of cosmic ray science from its accidental discovery to its present status He explains how cosmic rays are identified and how their energies are measured then surveys current knowledge and theories of thin cosmic rain The most thorough up to date and readable account of these intriguing phenomena his book makes us party to the search into the nature behavior and origins of cosmic rays and into the sources of their enormous energy sometimes hundreds of millions times greater than the energy achievable in the most powerful earthbound particle accelerators As this search led unexpectedly to the discovery of new particles such as the muon pion kaon and hyperon and as it reveals scenes of awesome violence in the cosmos and offers clues about black holes supernovas neutron stars quasars and neutrinos we see clearly why cosmic rays remain central to an astonishingly diverse range of research studies on scales infinitesimally small and large Attractively illustrated engagingly written this is a fascinating inside look at a science at the center of our understanding of our universe

[The Big Bang and Other Explosions in Nuclear and Particle Astrophysics](#) David N. Schramm, 1996 This volume of important papers by one the world's leading astrophysicists provides a sweeping survey of the incisive and exciting applications of nuclear and particle physics to a wide range of problems in astrophysics and cosmology The prime focus of the book is on Big Bang cosmology and the role of primordial nucleosynthesis in establishing the modern consensus on the Big Bang This leads into the connection of cosmology to particle physics and the constraints put on various elementary particles by astrophysical arguments Big Bang Nucleosynthesis has also led to the argument for nonbaryonic dark matter and is thus related to the major problem in physical cosmology today namely structure formation The nuclear particle interface with astrophysics also extends to the other topics of major interest such as the age of the universe cosmic rays supernovae and solar neutrinos each of which will be discussed in some detail Each section contains historical papers current papers and frequently a popular article on the subject which provides an overview of the topic This volume is testimony to the success of the integration of nuclear and particle physics with astrophysics and cosmology and to the ingenuity of the work in this area which has earned the author numerous prestigious awards The book which is accessible to beginning graduate students should be of particular interest to researchers and students in astronomy astrophysics cosmology and gravitation and also in high energy and nuclear physics

Neutrinos and Explosive Events

in the Universe Maurice M. Shapiro, Todor Stanev, John P. Wefel, 2005-10-28 This volume contains the Lectures and selected participant contributions to the 14th Course of the International School of Cosmic Rays Astrophysics a NATO Advanced Study Institute Well known astrophysicists and astronomers discuss different aspects of the generation of high energy signals in powerful astrophysical objects concentrating on the production of neutrinos and gamma rays from high energy particle interactions Recent results from new experiments and observatories are presented Topics cover a wide range including the Spitzer infrared observatory TeV gamma ray observations dark matter and neutrino telescopes The combination of basic knowledge about the production of high energy signals with information about the data analysis of ongoing observations places the book between the usual levels of a textbook and a conference proceedings It will give the reader a good introduction to the current field of astroparticle physics and some of the fascinating astrophysics being addressed
