Building Design Cost Management David Jagger, Andrew Ross, Jim Smith, Peter Love, 2002-08-30 The design and construction of building projects is a complex and demanding process It involves a variety of disciplines including architecture quantity surveying engineering and construction management The common objective is to deliver on behalf of clients commissioning construction work buildings of the right quality at the right price and within the right time scale This introductory textbook

explains the development application and pivotal role of design cost management from inception through to completion of a project and considers its context and relevance within current construction procurement arrangements including design and build. The text discusses the need for improvements in communication between all those involved in the process and outlines how to achieve better information management underpinned by information technology to help overcome the criticisms of the industry for too often delivering projects late over budget and of poor quality. Building Design Cost Management will benefit all those involved in the design and construction of buildings in particular students of architecture quantity surveying and construction management as it takes an innovative approach to explain the process of design cost management using a practical case study to demonstrate its application supported by a dedicated website www.bdcm.co.uk includes on the website selective information from the nationally available Building Cost Information Service to give students a dynamic modelling tool to examine and carry out design cost management.

Cost Accounting and Financial Management for Construction Project Managers Len Holm, 2018-09-03 Proper cost accounting and financial management are essential elements of any successful construction job and therefore make up essential skills for construction project managers and project engineers. Many textbooks on the market focus on the theoretical principles of accounting and finance required for head office staff like the chief financial officer (CFO) of a construction firm. This book's unique practical approach focuses on the activities of the construction management team including the project manager, superintendent, project engineer, and jobsite cost engineers and cost accountants. In short, this book provides a seamless connection between cost accounting and construction project management from the construction management practitioner's perspective. Following a complete accounting cycle from the original estimate through cost controls to financial close out, the book makes use of one commercial construction project case study throughout. It covers key topics like financial statements, ratios, cost control, earned value, equipment depreciation, cash flow, and pay requests. But unlike other texts, this book also covers additional financial responsibilities such as cost estimates, change orders, and project close out. Also included are more advanced accounting and financial topics such as supply chain management, activity-based accounting, lean construction techniques, taxes, and the developer's pro forma. Each chapter contains review questions and applied exercises, and the book is supplemented with an eResource with instructor manual, estimates, and schedules, further cases, and figures from the book. This textbook is ideal for use in all cost accounting and financial management classes on both undergraduate and graduate level construction management or construction engineering programs.
