**International Books in Print, 1995** Barbara Hopkinson, [Anonymus AC01401231], 1995 *INIS Atomindex*, 1988 Social Sensing and Big Data Computing for Disaster Management Zhenlong Li, Qunying Huang, Christopher T. Emrich, 2020-12-17 *Social Sensing and Big Data Computing for Disaster Management* captures recent advancements in leveraging social sensing and big data computing for

supporting disaster management Specifically analysed within this book are some of the promises and pitfalls of social sensing data for disaster relevant information extraction impact area assessment population mapping occurrence patterns geographical disparities in social media use and inclusion in larger decision support systems Traditional data collection methods such as remote sensing and field surveying often fail to offer timely information during or immediately following disaster events Social sensing enables all citizens to become part of a large sensor network which is low cost more comprehensive and always broadcasting situational awareness information However data collected with social sensing is often massive heterogeneous noisy and unreliable in some aspects It comes in continuous streams and often lacks geospatial reference information Together these issues represent a grand challenge toward fully leveraging social sensing for emergency management decision making under extreme duress Meanwhile big data computing methods and technologies such as high performance computing deep learning and multi source data fusion become critical components of using social sensing to understand the impact of and response to the disaster events in a timely fashion This book was originally published as a special issue of the International Journal of Digital Earth

Entropy Based Fatigue, Fracture, Failure Prediction and Structural Health Monitoring Cemal Basaran, 2021-01-13 Traditionally fatigue fracture damage mechanics are predictions are based on empirical curve fitting models based on experimental data However when entropy is used as the metric for degradation of the material the modeling process becomes physics based rather than empirical modeling Because entropy generation in a material can be calculated from the fundamental equation of the material This collection of manuscripts is about using entropy for Fatigue Fracture Failure Prediction and Structural Health Monitoring The theoretical paper in the collection provides the mathematical and physics framework behind the unified mechanics theory which unifies universal laws of motion of Newton and laws of thermodynamics at ab initio level Unified Mechanics introduces an additional axis called Thermodynamic State Index axis which is linearly independent from Newtonian space  $x, y, z$  and time As a result derivative of displacement with respect to entropy is not zero in unified mechanics theory as in Newtonian mechanics Any material is treated as a thermodynamic system and fundamental equation of the material is derived Fundamental equation defines entropy generation rate in the system Experimental papers in the collection prove validity of using entropy as a stable metric for Fatigue Fracture Failure Prediction and Structural Health Monitoring
