The Cougar Paula Wild,2013-09-06 The Cougar is a skillful blend of natural history scientific research First Nations stories and first person accounts With her in depth research Wild explores the relationship between mountain lions and humans and provides the most up to date information on cougar awareness and defense tactics for those living working or travelling in cougar country  
The Predator Paradox John A. Shivik,2015-04-14 An expert in wildlife management tells the stories of those who are finding new ways for humans and mammalian predators to coexist Stories of backyard bears and cat eating coyotes are becoming increasingly common even for people living in non rural areas Farmers anxious to protect their sheep from wolves aren t the only ones concerned suburbanites and city dwellers are also having more unwanted run ins with mammalian predators And that might not be a bad thing After all our government has been at war with wildlife since 1914 and the death toll has been tremendous federal agents kill a combined ninety thousand wolves bears coyotes and cougars every year often with dubious biological effectiveness Only recently have these species begun to recover Given improved scientific understanding and methods can we continue to slow the slaughter and allow populations of mammalian predators to resume their positions as keystone species As carnivore populations increase however their proximity to people pets and livestock leads to more conflict and we are once again left to negotiate the uneasy terrain between elimination and conservation In *The Predator Paradox* veteran wildlife management expert John Shivik argues that we can end the war while still preserving and protecting these key species as fundamental components of healthy ecosystems By reducing almost sole reliance on broad scale death from above tactics and by incorporating nonlethal approaches to managing wildlife from electrified flagging to motion sensor lights we can dismantle the paradox have both people and predators on the landscape and ensure the long term survival of both As the boundary between human and animal habitat blurs preventing human wildlife conflict depends as much on changing animal behavior as on changing our own perceptions attitudes and actions To that end Shivik focuses on the facts mollifies fears and presents a variety of tools and tactics for consideration Blending the science of the wild with entertaining and dramatic storytelling Shivik s clear eyed pragmatism allows him to appeal to both sides of the debate while arguing for the possibility of coexistence between ranchers and environmentalists wildlife managers and animal welfare activists and humans and animals  
*People and Predators* Defenders of Wildlife,2012-06-22 Carnivores provide innumerable ecological benefits and play a unique role in preserving and maintaining ecosystem services and function but at the same time they can create serious problems for human populations A key question for conservation biologists and wildlife managers is how to manage the world s carnivore populations to conserve this important natural resource while mitigating harmful impacts on humans In *People and Predators* leading scientists and researchers offer case studies of human carnivore conflicts in a variety of landscapes including rural urban and political The book covers a diverse

range of taxa geographic regions and conflict scenarios with each chapter dealing with a specific facet of human carnivore interactions and offering practical concrete approaches to resolving the conflict under consideration Chapters provide background on particular problems and describe how challenges have been met or what research or tools are still needed to resolve the conflicts People and Predators will help readers to better understand issues of carnivore conservation in the 21st century and provides practical tools for resolving many of the problems that stand between us and a future in which carnivores fulfill their historic ecological roles

**Heart of a Lion** William Stolzenburg, 2016-04-12 This is one stirring account of one stirring journey the trek of a fellow creature through a hostile man made world and through our imaginations Bill McKibben author of *EARTH MAKING A LIFE ON A TOUGH NEW PLANET* Late one June night in 2011 a large animal collided with an SUV cruising down a Connecticut parkway The creature appeared as something out of New England's forgotten past Beside the road lay a 140 pound mountain lion Speculations ran wild the wildest of which figured him a ghostly survivor from a bygone century when lions last roamed the eastern United States But a more fantastic scenario of facts soon unfolded The lion was three years old with a DNA trail embarking from the Black Hills of South Dakota on a cross country odyssey eventually passing within thirty miles of New York City It was the farthest landbound trek ever recorded for a wild animal in America by a barely weaned teenager venturing solo through hostile terrain William Stolzenburg retraces his two year journey from his embattled birthplace in the Black Hills across the Great Plains and the Mississippi River through Midwest metropolises and remote northern forests to his tragic finale upon Connecticut's Gold Coast Along the way the lion traverses lands with people gunning for his kind as well as those championing his cause Heart of a Lion is a story of one heroic creature pitting instinct against towering odds coming home to a society deeply divided over his return It is a testament to the resilience of nature and a test of humanity's willingness to live again beside the ultimate symbol of wildness

Wyoming Wildlife, 2002 **Cougar** Maurice Hornocker, Sharon Negri, 2009-12-15 The cougar is one of the most beautiful enigmatic and majestic animals in the Americas Eliciting reverence for its grace and independent nature it also triggers fear when it comes into contact with people pets and livestock or competes for hunters game Mystery myth and misunderstanding surround this remarkable creature The cougar's range once extended from northern Canada to the tip of South America and from the Pacific to the Atlantic making it the most widespread animal in the western hemisphere But overhunting and loss of habitat vastly reduced cougar numbers by the early twentieth century across much of its historical range and today the cougar faces numerous threats as burgeoning human development encroaches on its remaining habitat When Maurice Hornocker began the first long term study of cougars in the Idaho wilderness in 1964 little was known about this large cat Its secretive nature and rarity in the landscape made it difficult to study But his groundbreaking research yielded major insights and was the prelude to further research on this controversial species The capstone to Hornocker's long career studying big cats Cougar is a powerful and practical resource for scientists conservationists and anyone with an

interest in large carnivores He and conservationist Sharon Negri bring together the diverse perspectives of twenty two distinguished scientists to provide the fullest account of the cougar s ecology behavior and genetics its role as a top predator and its conservation needs This compilation of recent findings stunning photographs and firsthand accounts of field research unravels the mysteries of this magnificent animal and emphasizes its importance in healthy ecosystem processes and in our lives Arizona Wildlife Views ,2002 **Journal of the West** ,2005 American Book Publishing Record ,2001 **The Quotable Cowboy** Kathy Etling,2002 More than 300 poignant moving or hilarious quotes about the American frontier
