Kay,2012-12-06 Group Technology and Cellular Manufacturing GT CM have been widely researched areas in the past 15 years and much progress has been made in all branches of GT CM Resulting from this research activity has been a proliferation of techniques for part machine grouping

engineering data bases expert system based design methods for identifying part families new analytical and simulation tools for evaluating performance of cells new types of cell incorporating robotics and flexible automation team based approaches for organizing the work force and much more however the field lacks a careful compilation of this research and its outcomes The editors of this book have commissioned leading researchers and implementers to prepare specific treatments of topics for their special areas of expertise in this broad based philosophy of manufacturing The editors have sought to be global both in coverage of topic matters and contributors Group Technology and Cellular Manufacturing addresses the needs and interests of three groups of individuals in the manufacturing field academic researchers industry practitioners and students 1 The book provides an up to date perspective incorporating the advances made in GT CM during the past 15 years As a natural extension to this research it synthesizes the latest industry practices and outcomes to guide research to greater real world relevance 2 The book makes clear the foundations of GT CM from the core elements of new developments which are aimed at reducing developmental and manufacturing lead times costs and at improving business quality and performance 3 Finally the book can be used as a textbook for graduate students in engineering and management for studying the field of Group Technology and Cellular Manufacturing

**Cellular Manufacturing** John X. Wang,2015-01-14 In today's business world competitiveness defines the industrial leading edge. Organizations and businesses of all sizes are adopting Lean manufacturing practices to increase efficiency and address worries about their bottom lines. In a detailed review of this staple of Lean manufacturing, Cellular Manufacturing Mitigating Risk and Uncertainty outlines how cellular manufacturing can do just that. It demonstrates how this approach can help you and your teams build a variety of products with as little waste as possible. The book begins by presenting a survey of the current state of existing methods that can best be used in the handling of the bottleneck machines and parts problem which results from the cellular manufacturing system design. It then explores how decision making under risk is used to help the designer select the best cell arrangement in case of probabilistic production volume and maximize the profit imposed by resource capacity constraints. The author then presents a method for the system design of a manufacturing cell that aims for profit maximization over a certain period of time. He also discusses robust design illustrated with a real application. Put simply, cellular manufacturing integrates machinery and a small team of staff directed by a team leader so all the work on a product or part can be accomplished in the same cell, eliminating resources that do not add value to the product. A concise yet unique reference, this book incorporates decision making under risk into cellular manufacturing. The text makes the link that ties cellular manufacturing to the bottom line. It helps you recognize savings opportunities from elimination of downtime between operations, decreased material handling costs, decreased work in progress inventory and associated costs, reduced opportunity for handling errors, decreased downtime spent waiting for supplies or materials and reduced losses from defective or obsolete products.
