## **Continuum Alessandro Francesco:**

Continuum Alessandro De Francesco, 2015-11-25 This book reunites the most part of the essays and articles produced between 2007 and 2015 by poet and artist Alessandro De Francesco. It shows what De Francesco himself affirms at a point in the last text of the book that an artist can also be a theorist and that artistic practice and theoretical practice are difficult to distinguish in his work. This book is multilingual each text was left in the language in which it was written. Therefore it is predominantly in French but Italian English and German are also represented. In spite of poetry being at the center of Alessandro De Francesco's interests as a thinker the texts contained in this book are very heterogeneous poetic statements essays scientific articles lectures interviews and yet they also show a deep continuity. Continuum stands for the author's uninterrupted commitment for poetry for the numerous connections among the approached themes and especially for the innovative theoretical and political positions expressed here from which all these writings originated.

*Generalized Continua as Models for Classical and Advanced Materials* Holm Altenbach, Samuel Forest, 2016-04-15 This volume is devoted to an actual topic which is the focus world wide of various research groups. It contains contributions describing the material behavior on different scales new existence and uniqueness theorems the formulation of constitutive equations for advanced materials. The main emphasis of the contributions is directed on the following items: Modelling and simulation of natural and artificial materials with significant microstructure. Generalized continua as a result of multi scale models. Multi field actions on materials resulting in generalized material models. Theories including higher gradients and Comparison with discrete modelling approaches.

Atomic-Scale Modelling of Electrochemical Systems Marko M. Melander, Tomi T. Laurila, Kari Laasonen, 2021-09-09 Atomic Scale Modelling of Electrochemical Systems A comprehensive overview of atomistic computational electrochemistry discussing methods implementation and state of the art applications in the field. The first book to review state of the art computational and theoretical methods for modelling understanding and predicting the properties of electrochemical interfaces. This book presents a detailed description of the current methods their background limitations and use for addressing the electrochemical interface and reactions. It also highlights several applications in electrocatalysis and electrochemistry. Atomic Scale Modelling of Electrochemical Systems discusses different ways of including the electrode potential in the computational setup and fixed potential calculations within the framework of grand canonical density functional theory. It examines classical and quantum mechanical models for the solid liquid interface and formation of an electrochemical double layer using molecular dynamics and or continuum descriptions. A thermodynamic description of the interface and reactions taking place at the interface as a function of the electrode potential is provided as are novel ways to describe rates of heterogeneous electron transfer proton coupled electron transfer and other electrocatalytic reactions. The book also covers multiscale modelling where atomic level information is used for predicting experimental observables to enable direct comparison with experiments to rationalize experimental results and to predict the
