**Video Cameras** Gerald P. McGinty,1984     *Quantitative Coronary and Left Ventricular Cineangiography* Johan H. C. Reiber,P.W. Serruys,C.J. Slager,2012-12-06 In recent years there has been an increasing interest in quantitative analysis of coronary cineangiograms and already for a longer time of left ventricular cineangiograms The need for quantitation of coronary arterial dimensions has been stimulated by the introduction of new therapeutic procedures in the catheterization laboratory such as the balloon dilatation technique PTCA and thrombolytic therapy by the need to study the vasoactive responses of pharmaceutical agents and also by the desire to study the progressive nature of coronary artery disease with the ultimate goal to find ways to bring a halt to the progression of coronary atherosclerosis or even achieve regression of the disease Parallel with these clinical developments rapid technical developments in computer architectures and semiconductor memories have made it possible to digitize and store cineframes or selected portions thereof in image processors and to analyze these pictorial data quantitatively at affordable prices More than 15 years of research have been directed by various groups towards the semi or fully automated delineation of the left ventricular boundaries on a frame to frame basis Yet not a single system with fully automated capability is commercially available In the meantime many different left ventricular wall motion models have been developed again with little consensus on which model is to be preferred as no golden standard exists
