## Chapter 1 Exercise Solutions

- 1.1 Give five types of hardware resource and five types of data or software resource that can usefully be shared. Give examples of their sharing as it occurs in distributed systems.

*1.1 Ans.*

### Hardware

**CPU:** compute server (executes processor-intensive applications for clients), remote object server (executes methods on behalf of clients), worm program (shares cpu capacity of desktop machine with the local user). Most other servers, such as file servers, do some computation for their clients, hence their cpu is a shared resource.

**memory:** cache server (holds recently-accessed web pages in its RAM, for faster access by other local computers)

**disk:** file server, virtual disk server (see Chapter 8), video on demand server (see Chapter 15).

**screen:** Network window systems, such as X-11, allow processes in remote computers to update the content of windows.

**printer:** networked printers accept print jobs from many computers, managing them with a queuing system.

**network capacity:** packet transmission enables many simultaneous communication channels (streams of data) to be transmitted on the same circuits.

### Data/software

**web page:** web servers enable multiple clients to share read-only page content (usually stored in a file, but sometimes generated on-the-fly).

**file:** file servers enable multiple clients to share read-write files. Conflicting updates may result in inconsistent results. Most useful for files that change infrequently, such as software binaries.

**object:** possibilities for software objects are limitless. E.g. shared whiteboard, shared diary, room booking system, etc.

**database:** databases are intended to record the definitive state of some related sets of data. They have been shared ever since multi-user computers appeared. They include techniques to manage concurrent updates.

**newsgroup content:** The netnews system makes read-only copies of the recently-posted news items available to clients throughout the Internet. A copy of newsgroup content is maintained at each netnews server that is an approximate replica of those at other servers. Each server makes its data available to multiple clients.

**video/audio stream:** Servers can store entire videos on disk and deliver them at playback speed to multiple clients simultaneously.

**exclusive lock:** a system-level object provided by a lock server, enabling several clients to coordinate their use of a resource (such as printer that does not include a queuing scheme).

**Dust Or Magic, Creative Work in the Digital Age** Bob Hughes, 2007 A book for the interface workers Dust or Magic was primarily written for the young talented people whose creative instincts are kindled by computers and live to create good stuff but who are systematically betrayed by the managerial types in suits who hire them set them absurd tasks and sack them when their half baked schemes go belly up It is also for people who simply want to know how human creativity fares in the digital age

Originally published by Addison Wesley under the title *Dust or Magic* Secrets of successful multimedia design this book is in part a secret history of computers a history told from the vantage point of the people who did the work We have insiders accounts of a range of influential products and projects many of which were in danger of being forgotten The scene is illuminated by recent insights into creativity and well being from the fields of psychology and neuroscience as well as tried and tested practical strategies for workplace survival from other industries The author Bob Hughes has been a creative for most of his working life first a calligrapher then an advertising artist and copywriter before discovering computers in the mid 1980s He now teaches at Oxford Brookes University on the MA in Interactive Media Publishing and researches and writes about the wider impact of electronics and computers in workplaces world wide He also campaigns on behalf of migrants refugees and all precarious workers What you are doing is stripping away the corporate bullshit from this revolution its ours not theirs Reclaim the pixels Chris McEvoy Creator of Usability Must Die [www.usabilitymustdie.com](http://www.usabilitymustdie.com) There are many books explaining why software projects go sour this one breaks the mold by showing how they come good Malcolm Cook Senior Lecturer in Human Factors University of Abertay It was incredibly engrossing I expected to skim through it and found myself reading it avidly putting aside all the other work I should have been doing It rang so true about so many things about the process of creating the virtual world we spend so much time in that I m dying to share it with others who also create for it or want to Aleen Stein co founder of the Voyager Company and CEO of Organa inc [www.organa.com](http://www.organa.com) More information on [www.idhub.com/magic](http://www.idhub.com/magic)
