

Chapter 13 Lab From DNA to Protein Synthesis

Problem

What are the steps involved in making a protein?

Introduction

Protein is protein and for better, the biochemical significance for the construction must be packaged and transferred out of the DNA is "messy." First, the specific sequence of DNA that codes for the protein is transcribed into a complementary strand of mRNA. In eukaryotic cells, the mRNA then leaves the nucleus and enters the cytoplasm. In all cells, the mRNA molecule attaches to a ribosome, where tRNA molecules translate the mRNA into amino acids. The completed amino acid chain, or polypeptide, then folds into its final shape as a protein.

In this lab, you will model transcription of DNA and translation of mRNA while you decode secret messages.

Skills Focus

Key Methods: Sequence

Pre-Lab Questions

1. **Sequence** Consider briefly the process you will use to decode the message.

2. **Compare and Contrast** What are the step-by-step differences between transcription? What are they used for in the coded message?

3. **Predict** Which are letters will you appear in the coded message? Give a reason for your answer.
