

**Prokaryotes**

Prokaryotes are single-celled microorganisms that are structurally and functionally simpler than eukaryotes. In prokaryotes there are no organelles, the nucleus and membrane that surround the cell are not well developed and the cell is not divided into compartments. Bacteria are the most common type of prokaryotes and they have a cell wall made of proteins and carbohydrates. Prokaryotes are found in many environments and are important for the breakdown of dead organisms and the recycling of nutrients. They are also important for the breakdown of organic matter in the soil and for the production of oxygen by the photosynthesis of cyanobacteria. Finally, all the characteristics of bacteria are summarized in the following table.

**Prokaryotes and Eukaryotes**
