Commutative Algebra Constructive Methods Finite Projective Modules Algebra And Applications:

Commutative Algebra: Constructive Methods Henri Lombardi,Claude Quitté,2015-07-22 Translated from the popular French edition this book offers a detailed introduction to various basic concepts methods principles and results of commutative algebra It takes a constructive viewpoint in commutative algebra and studies algorithmic approaches alongside several abstract classical theories Indeed it revisits these traditional topics with a new and simplifying manner making the subject both accessible and innovative The algorithmic aspects of such naturally abstract topics as Galois theory Dedekind rings Pr fer rings finitely generated projective modules dimension theory of commutative rings and others in the current treatise are all analysed in the spirit of the great developers of constructive algebra in the nineteenth century This updated and revised edition contains over 350 well arranged exercises together with their helpful hints for solution A basic knowledge of linear algebra group theory elementary number theory as well as the fundamentals of ring and module theory is required Commutative Algebra Constructive Methods will be useful for graduate students and also researchers instructors and theoretical computer scientists

[Paul Lorenzen -- Mathematician and Logician](#) Gerhard Heinzmann,Gereon Wolters,2021-08-17 This open access book examines the many contributions of Paul Lorenzen an outstanding philosopher from the latter half of the 20th century It features papers focused on integrating Lorenzen s original approach into the history of logic and mathematics The papers also explore how practitioners can implement Lorenzen s systematical ideas in today s debates on proof theoretic semantics databank management and stochastics Coverage details key contributions of Lorenzen to constructive mathematics Lorenzen s work on lattice groups and divisibility theory and modern set theory and Lorenzen s critique of actual infinity The contributors also look at the main problem of Grundlagenforschung and Lorenzen s consistency proof and Hilbert s larger program In addition the papers offer a constructive examination of a Russell style Ramified Type Theory and a way out of the circularity puzzle within the operative justification of logic and mathematics Paul Lorenzen s name is associated with the Erlangen School of Methodical Constructivism of which the approach in linguistic philosophy and philosophy of science determined philosophical discussions especially in Germany in the 1960s and 1970s This volume features 10 papers from a meeting that took place at the University of Konstanz

[Logic, Language, Information, and Computation](#) Rosalie Iemhoff,Michael Moortgat,Ruy de Queiroz,2019-06-23 Edited in collaboration with FoLLI the Association of Logic Language and Information this book constitutes the refereed proceedings of the 26th Workshop on Logic Language Information and Communication WoLLIC 2019 held in Utrecht The Netherlands in July 2019 The 41 full papers together with 6 invited

lectures presented were fully reviewed and selected from 60 submissions. The idea is to have a forum which is large enough in the number of possible interactions between logic and the sciences related to information and computation and yet is small enough to allow for concrete and useful interaction among participants

Handbook of Constructive Mathematics

Douglas Bridges, Hajime Ishihara, Michael Rathjen, Helmut Schwichtenberg, 2023-05-11. Constructive mathematics mathematics in which there exists always means we can construct is enjoying a renaissance fifty years on from Bishop's groundbreaking account of constructive analysis. Constructive mathematics has spread out to touch almost all areas of mathematics and to have profound influence in theoretical computer science. This handbook gives the most complete overview of modern constructive mathematics with contributions from leading specialists surveying the subject's myriad aspects. Major themes include constructive algebra and geometry, constructive analysis, constructive topology, constructive logic and foundations of mathematics and computational aspects of constructive mathematics. A series of introductory chapters provides graduate students and other newcomers to the subject with foundations for the surveys that follow. Edited by four of the most eminent experts in the field, this is an indispensable reference for constructive mathematicians and a fascinating vista of modern constructivism for the increasing number of researchers interested in constructive approaches.

Concepts of Proof in Mathematics, Philosophy, and Computer Science Dieter Probst, Peter Schuster, 2016-07-25. A proof is a successful demonstration that a conclusion necessarily follows by logical reasoning from axioms which are considered evident for the given context and agreed upon by the community. It is this concept that sets mathematics apart from other disciplines and distinguishes it as the prototype of a deductive science. Proofs thus are utterly relevant for research, teaching and communication in mathematics and of particular interest for the philosophy of mathematics. In computer science, moreover, proofs have proved to be a rich source for already certified algorithms. This book provides the reader with a collection of articles covering relevant current research topics circled around the concept proof. It tries to give due consideration to the depth and breadth of the subject by discussing its philosophical and methodological aspects, addressing foundational issues induced by Hilbert's Programme and the benefits of the arising formal notions of proof without neglecting reasoning in natural language proofs and applications in computer science such as program extraction.

Constructive Commutative Algebra Ihsen Yengui, 2015-12-11. The main goal of this book is to find the constructive content hidden in abstract proofs of concrete theorems in Commutative Algebra especially in well known theorems concerning projective modules over polynomial rings mainly the Quillen-Suslin theorem and syzygies of multivariate polynomials with coefficients in a valuation ring. Simple and constructive proofs of some results in the theory of projective modules over polynomial rings are also given and light is cast upon recent progress on the Hermite ring and Gröbner ring conjectures. New conjectures on unimodular completion arising from our constructive approach to the unimodular completion problem are presented. Constructive algebra can be understood as a first preprocessing step for computer algebra that leads

to the discovery of general algorithms even if they are sometimes not efficient From a logical point of view the dynamical evaluation gives a constructive substitute for two highly nonconstructive tools of abstract algebra the Law of Excluded Middle and Zorn's Lemma For instance these tools are required in order to construct the complete prime factorization of an ideal in a Dedekind ring whereas the dynamical method reveals the computational content of this construction These lecture notes follow this dynamical philosophy **Mathematical Reviews** ,2004 **General Catalog -- University of California, Santa Cruz** University of California, Santa Cruz,1987 *Computer Algebra* J.
